

ZEPHYR

Project Summary

Zephyr is conceived as a graphic outline of a traditional high-rise building. Ethereal and light, the structure defies conventions. At the top, a 360° observatory platform promises to frame spectacular panoramic views, while a large suspended net dramatically hangs above the Arena Green Park, creating a new kind of public space.

The structure is strategically placed at the edge of the park to maximize its urban exposure. At ground level, the building is open and transparent, with a total footprint as little as 530 square feet, keeping the gardens as untouched as possible.
