

## Project Summary

Through engagement and design, the *Galaxy* offers a new model of living, and creating connections with the natural world—a vital hub addressed to the community of future creative citizens. It is an evolving and constantly updated techno-organism fit for the 22 century and beyond. This net-zero project collects, processes, and communicates data from various sources, which is then transformed into a set of coherent responses—that presents as a full sensory experience.

Consisting of the 22 storeys high Main Intervention and related ‘satellites’, it houses Creative Technology Center, Botanical Garden, restaurant, cafes and ice cream stands scattered around the precinct.
