

## **Project Summary**

Our project is focused on a self-exploratory experience that has been interpreted by a linear formation, opening to multi-levels throughout different stairways, ramps, and escalators.

The methodology we have used for the Silicon Valley landmark was mainly focused on creating a joint and a bridge between the two sides of the subject site.

This journey will ultimately lead to the middle of the rooftop which we have coined "The Forward."

The total project gross area is 57,425 SQ. FT

The project consists of five main levels and two major masses with an inclined 8.33% tunnel that connects the two triangular masses.
