

ProjectStatement

The design proposal is based on two principles; that the object (icon), which is unique in the world, and considering that the individual, whether male or female, child or adult, with temporary or permanent disability, has a worldwide right, Leisure. Defining and taking Leisure as a trigger element of an economy that attracts people to the Site, to Silicone Valley, to San Francisco to the country. According to studies, the most sought-after leisure activity is active by young people and middle-aged adults, in its extreme form, that of observer, and the passive, which uses it as rest. Taking as a base that leisure is the element that serves to attract people and resources; the Icon will be based on providing or presenting a way of doing something, in an extreme way, as an observer and calmly doing the same. But what activity is required to do in the structure of an Icon. This activity is upload. Be it to the observatory, cafeteria, etc. It is located at the top of the icon. The first part of the proposal is more common and known, is to build a transparent tube with water, like an aquarium, for this there is evidence that it is possible; The second part of the proposal, we know that it exists, and it works, but it is not in common use is the torpedo camera for a submarine. Joining these two elements that already exist and is used to create a Submarine

Elevator, which consists of a capsule that is released without ballast and rises suddenly to the surface, and according to the amount of ballast that the capsule has, it is the speed that rises, this according to the tastes and emotions that people want to feel. As it has been exposed it is the combination of two different activities, but related to water. Not only will civil engineering be required, but possibly naval engineering as well. And I transcribe the following words: -What is known is that, what could be seen today as something normal, something everyday, in the beginning, when it was a great idea, before being a great and great idea, that idea began as crazy; that's a universal law of this life, all that new idea, it's always crazy.
