

The Grove Project Summary

The monumental redwood grove flourishing in the heart of San José consists of stunning aeries, shady sanctuaries, and sun-speckled playgrounds, linked by a series of iconic bridges and observation decks offering the public spectacular views and spaces for connection and recreation. Massive sculptural sequoias create a multilevel gathering place; at 200', the largest of these trees is the tallest sculptural installation in the world. LEED building practices and embedded solar and rainwater harvesting ensure net zero energy use, and the trees' branches feature programmable fiber-optic foliage.
