

ICONIC VIBRANCY
LED COLOR ADJUSTING WALL

REGENERATIVE LANDSCAPES
PASSIVE + NATIVE ECOLOGY

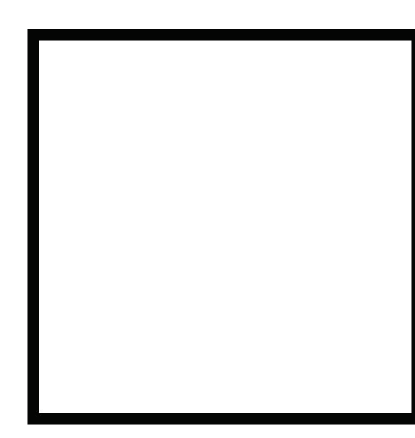

ADAPTABLE EXPERIENCES
DIGITAL MEDIA WALL

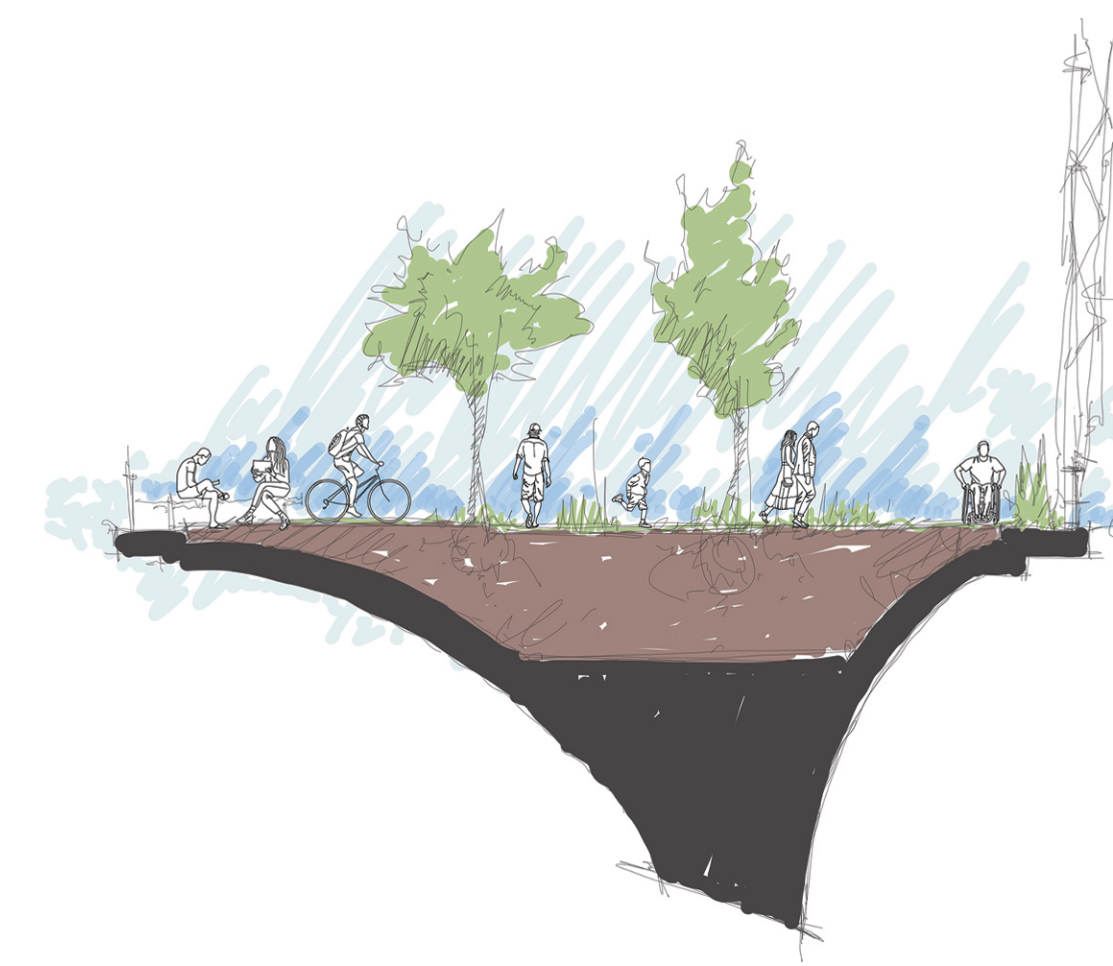

NET ZERO
PHOTOVOLTAIC INTEGRATED WALL

Interlace

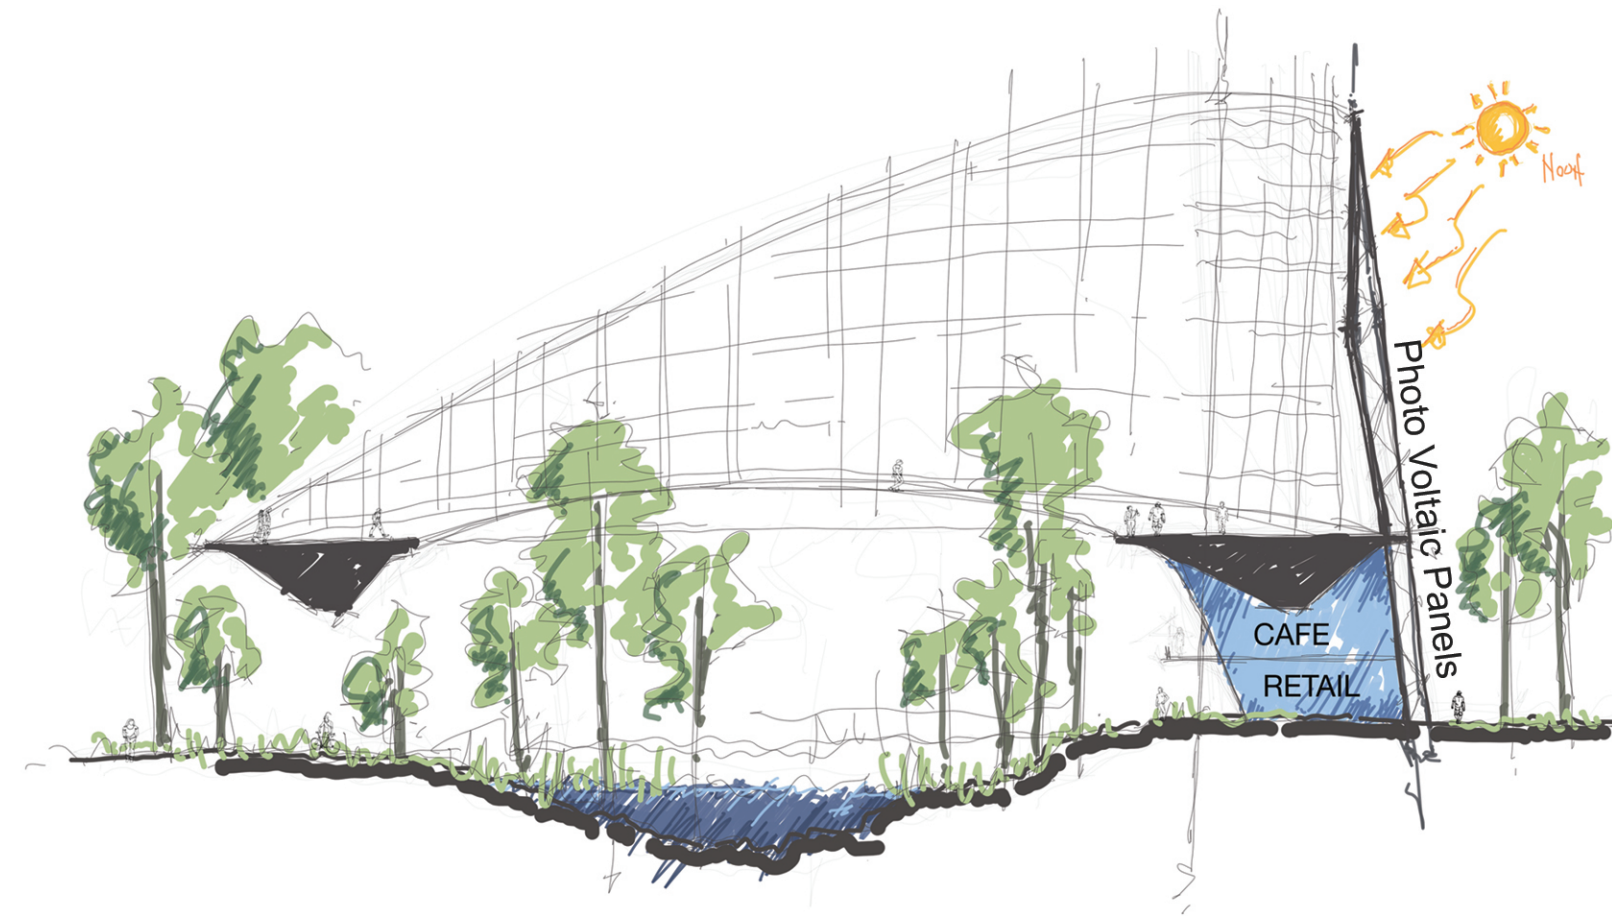

The bridges will create an interconnected experience of bike paths, running paths, green space, and restored landscapes.

All these linear environments will rise into the sky and cross over the river in an environmentally restorative manner.

New trees and constructed wetlands will be included in order to create an improved natural environment for the site. Ecological restoration will be fine tuned to attract wildlife that originally lived in this area of the city.

The entire site will achieve Net-Zero capability with the installation of a photo-voltaic array along the southern facing surfaces of the curved wall. The quantity of PV panels will collect enough power to run the site lights, provide power, and electricity for the retail and cafe elements.

Interlace

to unite, to intercross one another...
 to mingle, blend...
 to diversify, intersperse, intermingle...

“Build a globally iconic landmark...

that is inspirational and uniquely recognizable...

that represents a message of innovation, artistry...

a catalyst for cultural and economic rejuvenation...”
