

Interlace: to unite or arrange, to intercross one another. To mingle, blend. To diversify, to intersperse; intermingle.

A place created to enhance and enliven the human experience. The iconic impact of the monument will be rooted in the undeniable desire for people to connect with each other, nature, the city, and memorable experiences.

The Interlace is a series of gracefully overlapping pedestrian bridges that stitch the site into a singular experience. These experiences are seen through the filter of nature as the site is restored closer to its original state.
