

PROJECT STATEMENT – THE AVIARY

The *Aviary* is a 160' active sculpture and viewing deck. Abstract visualizations of birds shift through a hanging matrix of 2,900 electrochromic prisms. Swooping terns, circling hawks, and flocks of songbirds all appear as frosted flows during the day and a dance of light at dusk. The living patterns respond to activity within the park, a constantly changing digital performance.

A redesign of Arena Green West celebrates the current restoration projects in the Bay's tidal wetlands through both design and utility. Walkways flow around public performance venues, educational opportunities, scenic lookouts, and integrated systems for large-scale greywater and stormwater reuse.
