STRUCTURE
LIGHTING

The use of kinetic lighting illuminates gradually from the base to the top, giving the effect of the water running, like the river stream.

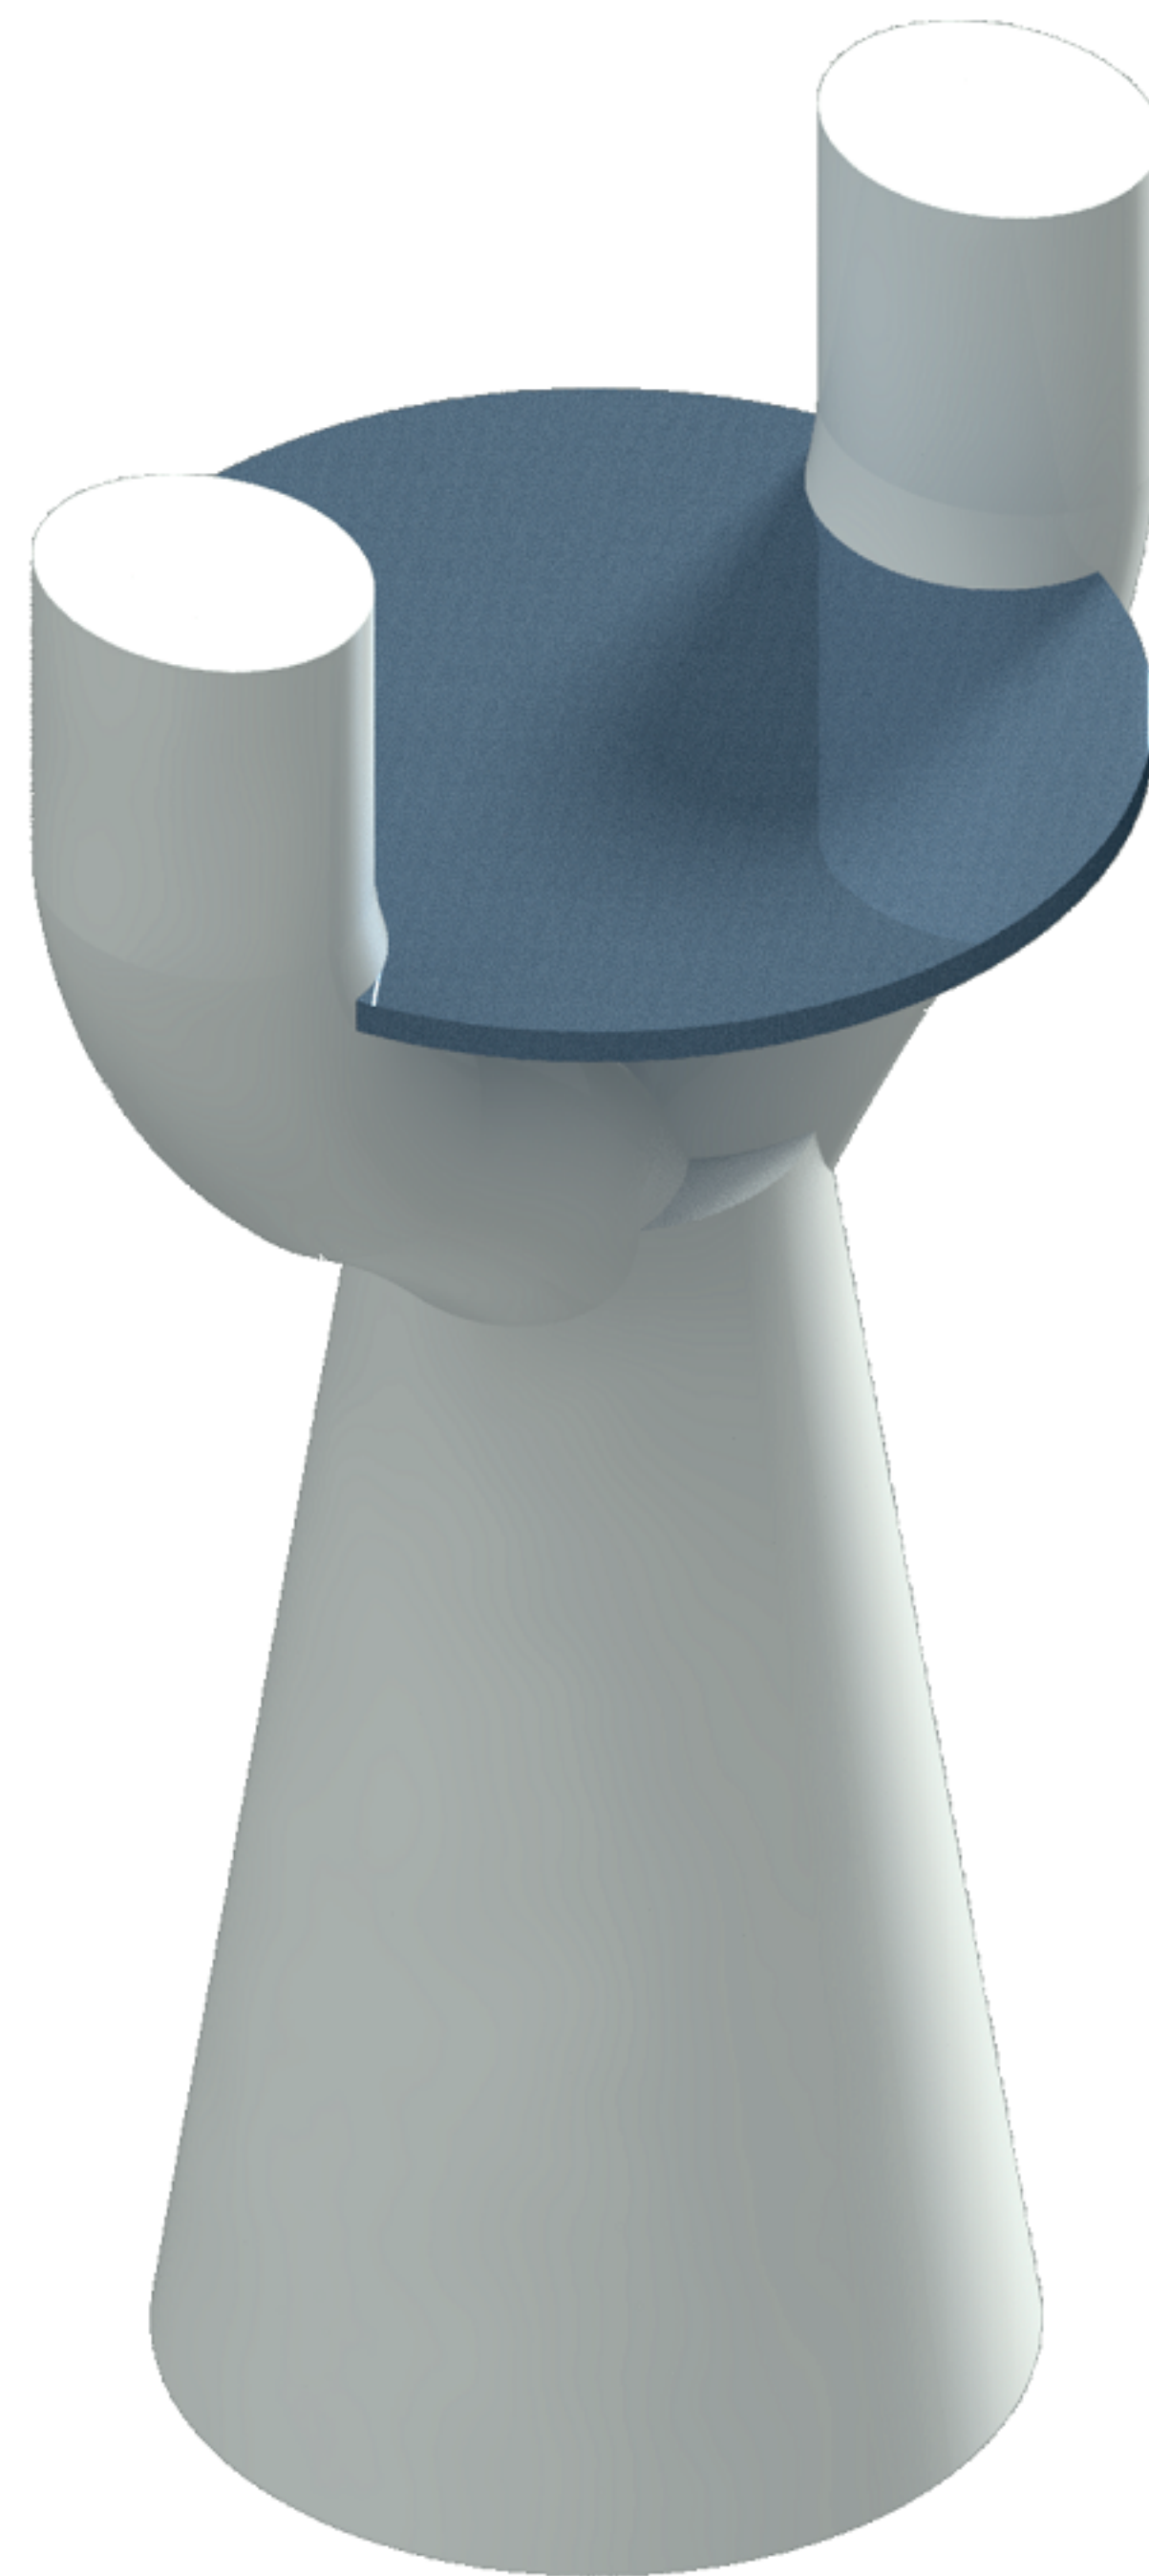

Each extreme on the top is emphasized by different color lights.

SITE MAP

“A vertical and sinuous shape is coming out from the ground. As it goes up bifurcates until the top. Each element is projected to take a different path but they are connected by a horizontal element: the observation platform.”

Inspired on the competition’s name, this structure represents the union of Guadalupe river and Los gatos creek.

The main function is an observation structure and also has complementary activities inside the building.
