

Growler Filler Instructions

#GF-15

Use this clever device to fill your beer growlers from the bottom up, which generates less foam than a direct pour. No room under the faucet? No problem! Your growler filler solves that problem too.

Instructions for use

Step 1

Dip the wider end of your growler filler into water.

Step 2

Slide that wetted end of the tubing over the draft faucet.

Step 3

Place the other end of the tubing into the growler, all the way to the bottom.

Step 4

Turn the faucet on and allow the growler to fill with draft beer.

Step 5

When the growler is full, shut the faucet off and remove the filler.

Step 6

Rinse the growler filler with warm water.
