# DineEngine RELEASE NOTES

Release Enhancements for June 7, 2021

**v.1.2.0**

# DineEngine® Release Notes Update

## What's New In Version 1.2.0

### IMPROVEMENTS

#### CHECKBOXES & RADIO BUTTONS FEATURE

- Added checkboxes and radio buttons as an alternate method of modifying a product instead of the usual “ingredient images” approach, which required a complete selection of photographs for all ingredients.
- Functionally, the feature is identical to the ingredient images, but cosmetically, it is much more compact, and doesn't have the potential for missing images.
- The feature uses a modal/pop-up, and (on both desktop and mobile) has a floating add-to-cart button and combo box.
- This is now a base app default feature. Can be toggled in the CMS per product.

*For more information about this new feature, please contact us, or join our June 15 DineEngine webinar [here](#).*

#### SMART UPSELLS

- Improved feature capabilities to allow conditional upsells. We added a field on products in the CMS that allows a brand to specify items to show in the upsell if an item is not in the cart (if A NOT in cart, show B, C, D, etc).
- Brands that utilize DineEngine upsells can now set up more granular upsell items that show up on a per-item basis instead of all the time.

#### PRODUCT DESCRIPTIONS

- We now have more accessible product descriptions (hovering description) using interactable info icons.
- If a product has a description there is now an info icon that appears on the product card.
- On mobile clicking, it will display a modal/pop-up with the description, while on desktop hovering over it will display a tool tip with the description.
- On mobile, the info icon appears immediately after the product name in order to not conflict with the price details on the right, while on desktop it always appears on the bottom-right corner of the card.

### Foreword

As a service to our clients, these DineEngine® release notes provide information about new app features and functionality, improvements, and bug fixes with each new iteration.

Because software is constantly evolving, we believe it is important to set the right expectations and keep our clients informed about meaningful updates. We believe users should know that their feedback was not only heard, but that it was leveraged to build better customer experiences.

### What is DineEngine?

DineEngine, a Base App made by Chepri®, is a turnkey guest experience platform for restaurant brands. Integrating top POS, ordering, loyalty, and payment providers, DineEngine produces bigger orders, faster checkouts and happier customers. DineEngine will boost sales and ROI with our guest touchpoint technology for web and mobile. This includes functionality such as tableside, curbside, and kiosks with full capability to develop bespoke components for unique guest experiences.

### New Premium Features

New DineEngine Base App checkboxes and radio buttons functionality is now built into the CMS, and can be toggled on and off at your convenience. This addition helps restaurant brands who may not have the time and/or resources to produce ingredient imagery for all products. The checkboxes and radio buttons upgrade also cuts down on the amount of scrolling users must do in order to fully select all modifiers for their food orders.

# 75 Years+ Combined Restaurant Experience

Custom app development solutions for restaurant and hospitality chains.

At any time you may contact us with questions about project updates, new scopes of work, and fast-track features. We can build out anything you require and/or desire. Need extra functionality and feature sets? Are resources tight? We can help with DineEngine Modular Packages, Digital Asset Packages, and Administrative Support Packages.

For DineEngine Project information, please contact Director of Product Operations Josh Phillips at 800-338-8102 x 505 or: [jphillips@chepri.com](mailto:jphillips@chepri.com)

For DineEngine Packages information, please contact Director of Business Development Keith Garrard at 800-338-8102 x 509 or: [kgarrard@chepri.com](mailto:kgarrard@chepri.com)

**Ashley Greathouse**  
Client Success

Ashley has over 15 years of customer service/restaurant experience and a Bachelor’s degree in Integrated Mathematics. She started her career in restaurants at the age of 15 working her way up to general manager of a local 3-unit fine dining bistro. Ashley’s empathetic nature towards restaurant owners, operators, and services team makes her great at understanding our customers and setting them up for success.

**Keith Garrard**  
Business Development

Starting with flipping burgers at the Columbus Zoo Amusement Park at age 15, Keith has experienced a lot in the restaurant & hospitality industry. Dishwasher, busboy, bellman, fry cook and bartender to name a few for several casual dining brands. In the last 15 years, he has applied those guest-centered approaches to custom technology software for learning, training, operational improvement, and guest ordering experience solutions.

**Josh Phillips**  
Operations

Josh has worked in the restaurant & hospitality industry for over 20 years. During that time, he played a pivotal role in the opening of four independent, distinct concepts, and the rebranding of several others, overseeing projects from foundational construction to POS implementations. Josh has specialized in managing vendor relationships, with a focus on the overall improvement of goal efficiency to meet objectives resulting in profitable outcomes.

## Your Team

We are a technology company that prides itself on great service, quality products, and best-in-class development. Our mission is to leverage technology to help restaurant brands succeed in an ever-changing digital landscape.

# Data connectivity utilizing your favorite third-party restaurant vendor API.

Your brand should be able to mix and match your favorite third-party API or data service to stay competitive. Chepri® can leverage technologies from facial recognition to payment processing to provide a restaurant’s digital users with expanded functionality and enhanced features. Therefore, seamless third-party integrations can be key to successfully improving your digital guest experience.

Mash your favorite APIs or data sources into a powerful suite of tools for customers and employees alike to produce innovations that give your restaurant brand a competitive advantage. Then, with full restaurant vendor API integrations, you can offer the greatest customer experience while making life easier for yourself, your managers and the entire team.

## Produce seamless applications with no friction

From headless CMS and digital asset management to loyalty data, bring a frictionless experience to your users.

## Utilizing new or existing third-party vendor API integrations is possible with Chepri.

Chepri provides technology services to restaurants who want to connect a third-party datapoint to any interface, display, or device. We also offer custom API development for restaurants looking to establish their own unique, fully integrated software solution.

*Choose from some of the top vendor partner connectors to get your next application up and running quickly.*
