DineEngine RELEASE NOTES

Release Enhancements for July 13, 2021

v.1.4.0

DineEngine® Release Notes Update

What's New In Version 1.4.0

IMPROVEMENTS

COMBINED CHECKBOXES, RADIO BUTTONS AND IMAGE SELECTION FEATURE

- We now have a modal which will show checkboxes, radio buttons and checkable images all on the same page.
- Previously, a brand would only be able to set one or the other.
- Now brands have the ability to use both simultaneously.
- This new feature now enhances the addition of checkboxes and radio buttons as an alternate method of modifying a product instead of the usual “ingredient images only” approach, which required a complete selection of photographs for all ingredients.
- The radio buttons and checkboxes feature is identical to the ingredient images, but cosmetically, it is much more compact, and reduces the need for excessive scrolling if chosen.
- Previously all selections had to be made at the product level, whereas now brands can leverage images on a per-modifier group basis.
- Previously, we had a CMS toggle on the product page that determined whether to use a modal and whether to use images. Now we now have a toggle on the product page that determines whether to use the modal, and a collection that determines whether to use images on a per-modifier group basis.
- The feature uses a modal/pop-up, and (on both desktop and mobile) has a floating add-to-cart button and combo box.
- This is now a base app default feature, and can be toggled in the CMS per modifier group. New modifier groups will default to using checkboxes and radio buttons.

For more information about this new feature, please contact us, or join our 3 p.m. August 18, 2021 DineEngine webinar [here](#).

Foreword

As a service to our clients, these DineEngine® release notes provide information about new app features and functionality, improvements, and bug fixes with each new iteration.

Because software is constantly evolving, we believe it is important to set the right expectations and keep our clients informed about meaningful updates. We believe users should know that their feedback was not only heard, but that it was leveraged to build better customer experiences.

What is DineEngine?

DineEngine, a Base App made by Chepri®, is a turnkey guest experience platform for restaurant brands. Integrating top POS, ordering, loyalty, and payment providers, DineEngine produces bigger orders, faster checkouts and happier customers. DineEngine will boost sales and ROI with our guest touchpoint technology for web and mobile. This includes functionality such as tableside, curbside, and kiosks with full capability to develop bespoke components for unique guest experiences.

New Premium Features

New DineEngine Base App checkboxes and radio buttons functionality is now built into the CMS, and can be toggled on and off at your convenience. This addition helps restaurant brands who may not have the time and/or resources to produce ingredient imagery for all products. The check boxes and radio buttons upgrade also cuts down on the amount of scrolling users must do in order to fully select all modifiers for their food orders.

75 Years+ Combined Restaurant Experience

Custom app development solutions for restaurant and hospitality chains.

At any time you may contact us with questions about project updates, new scopes of work, and fast-track features. We can build out anything you require and/or desire. Need extra functionality and feature sets? Are resources tight? We can help with DineEngine Modular Packages, Digital Asset Packages, and Administrative Support Packages.

For DineEngine Project information, please contact Director of Product Operations Josh Phillips at 800-338-8102 x 505 or: jphillips@chepri.com

For DineEngine Packages information, please contact Director of Business Development Keith Garrard at 800-338-8102 x 509 or: kgarrard@chepri.com

Ashley Greathouse
Client Success

Ashley has over 15 years of customer service/restaurant experience and a Bachelor’s degree in Integrated Mathematics. She started her career in restaurants at the age of 15 working her way up to general manager of a local 3-unit fine dining bistro. Ashley’s empathetic nature towards restaurant owners, operators, and services team makes her great at understanding our customers and setting them up for success.

Nicholas Norris
Application Support

Nick attended Franklin University as an undergraduate, and worked in the school’s IT department, handling the procurement of equipment, on-campus employee hardware & software support plus the installation and configuration of computer systems. At Chepri, Nick specializes in custom & product application development with an emphasis on finding creative solutions and generating stable code for multiple client projects.

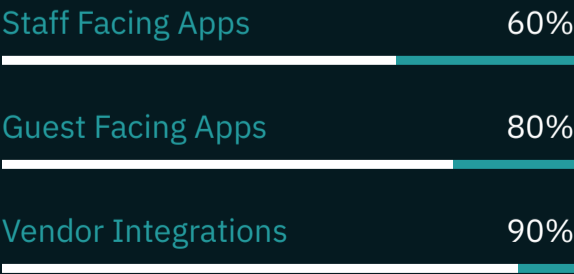

Josh Phillips
Operations

Josh has worked in the restaurant & hospitality industry for over 20 years. During that time, he played a pivotal role in the opening of four independent, distinct concepts, and the rebranding of several others, overseeing projects from foundational construction to POS implementations. Josh has specialized in managing vendor relationships, with a focus on the overall improvement of goal efficiency to meet objectives resulting in profitable outcomes.

Your Team

We are a technology company that prides itself on great service, quality products, and best-in-class development. Our mission is to leverage technology to help restaurant brands succeed in an ever-changing digital landscape.

Data connectivity utilizing your favorite third-party restaurant vendor API.

Your brand should be able to mix and match your favorite third-party API or data service to stay competitive. Chepri® can leverage technologies from facial recognition to payment processing to provide a restaurant’s digital users with expanded functionality and enhanced features. Therefore, seamless third-party integrations can be key to successfully improving your digital guest experience.

Mash your favorite APIs or data sources into a powerful suite of tools for customers and employees alike to produce innovations that give your restaurant brand a competitive advantage. Then, with full restaurant vendor API integrations, you can offer the greatest customer experience while making life easier for yourself, your managers and the entire team.

Produce seamless applications with no friction

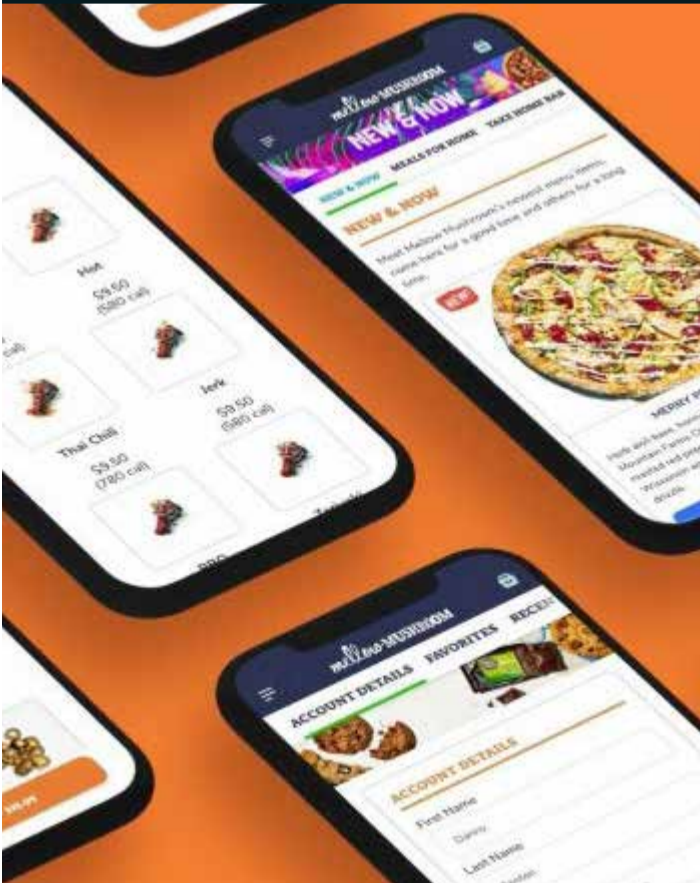

From headless CMS and digital asset management to loyalty data, bring a frictionless experience to your users.

Utilizing new or existing third-party vendor API integrations is possible with Chepri.

Chepri provides technology services to restaurants who want to connect a third-party datapoint to any interface, display, or device. We also offer custom API development for restaurants looking to establish their own unique, fully integrated software solution.

Choose from some of the top vendor partner connectors to get your next application up and running quickly.
