

# Hive9 Connectors: Integrating with Hive9

## Capabilities

### API-Based Connectors

When you need real-time, direct connectivity, APIs work best.

### File-Based Connectors

Our customers prefer file-based connectors for back-office systems and less popular performance platforms.

### Connectors Built for You

We are happy to add to our portfolio to meet specific customer needs.

### Integration Management Console

Manage all of your Hive9 integrations in one place.

## Consolidate All of Your Marketing Plans, Activities, Investments and Performance in One Place

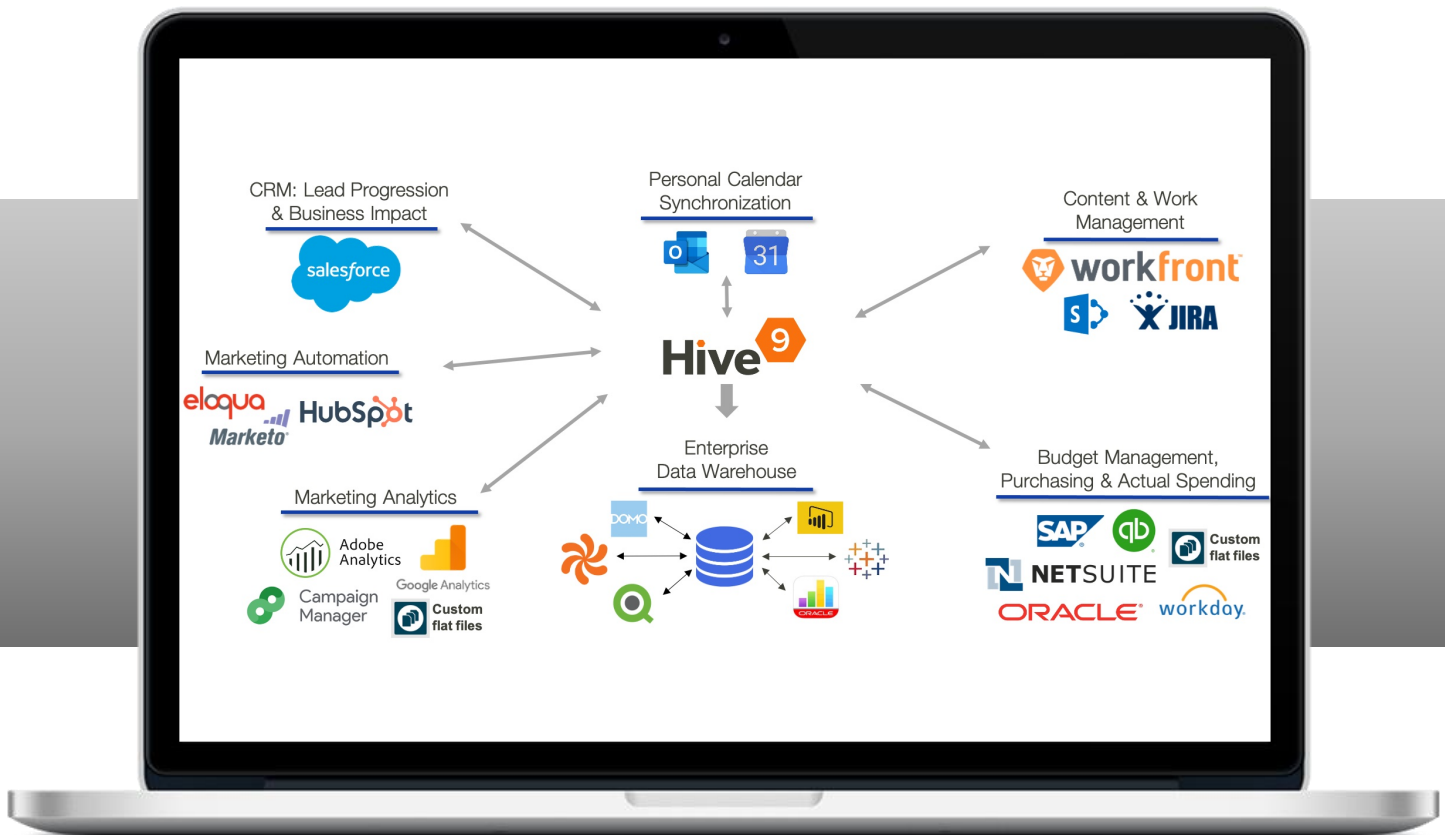

Hive9 recognizes that in order to maximize the effectiveness of your marketing plans, they must be connected to the rest of the marketing and back-office technology stack to ensure that all systems are in sync with accurate data.

Our integrations, falling into several categories, include calendars, work management, back-office financials and purchase support, enterprise data warehouses, marketing automation, analytics, and CRM.

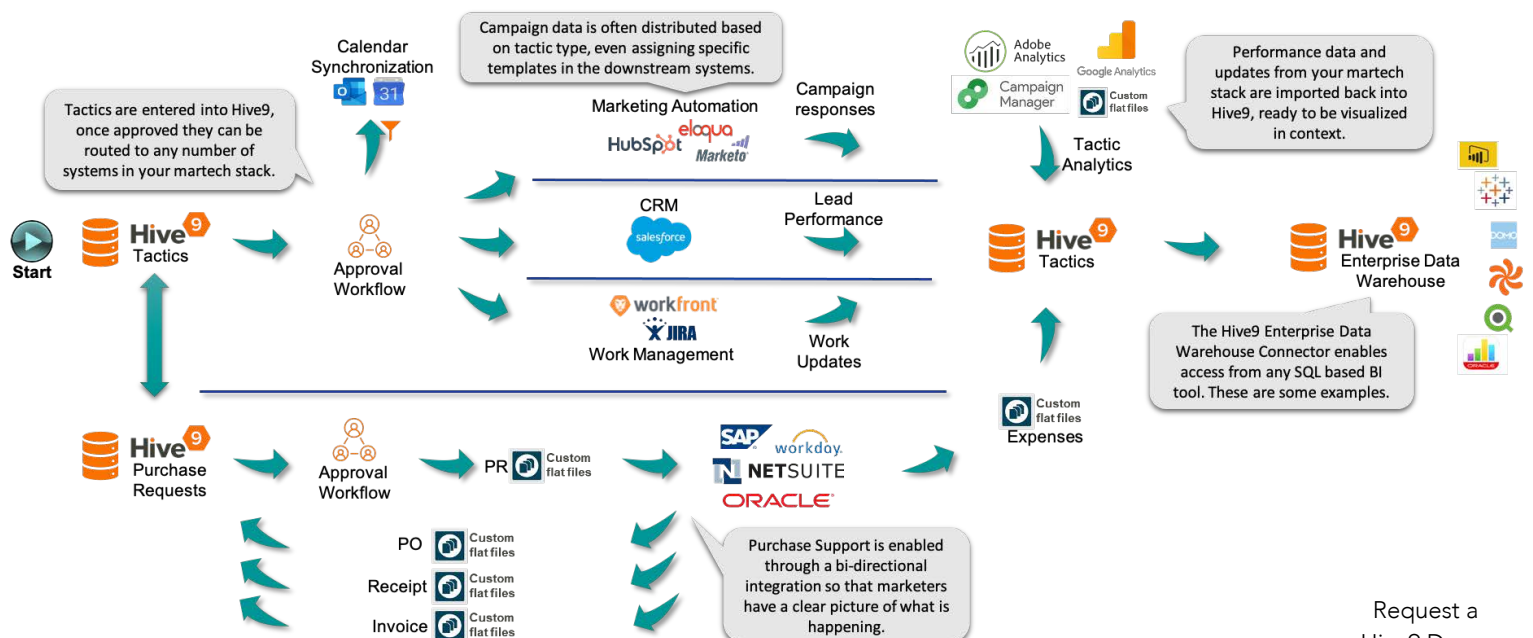

Customers can select from our existing API-based connectors to specific systems or make use of our multipurpose file-based connectors for back-office and "one-off" sources of data.

In the event that we do not have a specific connector that a customer needs, we will build new connectors for the same price as an existing connector, with the only impact being the timing of the availability of the new connector.

We'll work with you to configure, set up, map, test and deploy any new connectors.
