Portfolio Management – Challenges and Goals

- Challenges:

- Lots of parallel projects
- No flexibility in choosing what to prioritize for the mid term (2 months to 1 quarter)
- No easy connection between team level and organization level
- No rational way of determining priority

- Goals:

- be more predictable
- deliver fast
- deliver as much as possible

Portfolio Management – Approach

- Break down projects into smaller parts (Feature Sets)
 - Results in flexibility and more precise prioritization
- Define prioritization process
 - Clear and rational discussions about what should be done first
- Embed estimation and status feedback within capacity management process
 - Estimations and current status affect priority; who should be working on what
- Visualize status of ***all*** work
 - No surprises; bottlenecks immediately clear;
 - Analysis and estimation takes time and effort as well

Value Chain – Agile Definitions

Example

Business THEME

Digitise mortgage process

Project

STP

Feature sets

Recognise request
Process knowledge-intensive requests
Financial agreement

Features

Determine mutations + incorporate into request
Autom. Evaluation offered request
Recognise failure reason

User Stories

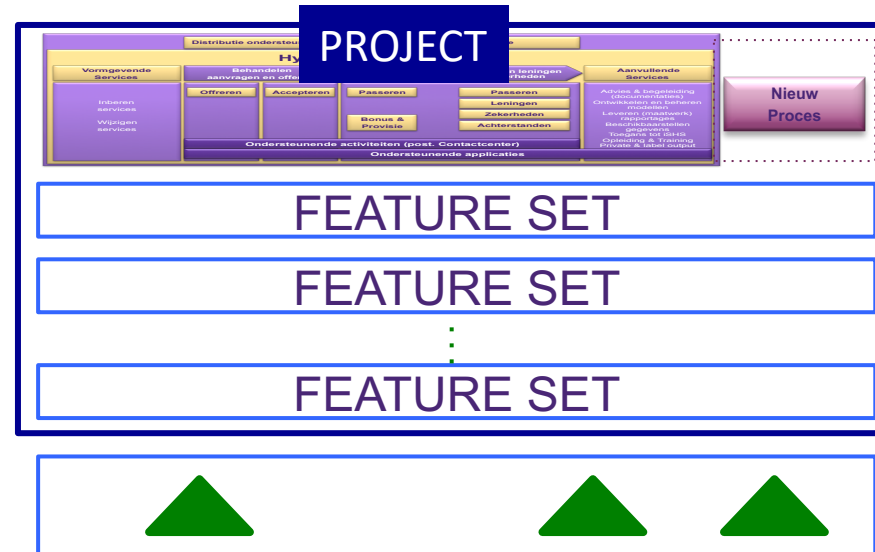

As credit acceptor I want that BKR-failure leads to separate BKR-tasks, so that they may be processed efficiently later.
As money lender I want requests that were delivered by certain intermediaries to be recognised as special requests, so that separate processing will follow.

Business Theme

Definitions

*Set of wishes / requirements
For a strategic goal*

Feature Set

Set of work packages

*Set of features with
customer value
and functionally releasable
(only as a whole)*

Feature

Work package

*Smallest requirement
with customer value
(may be only technically useable
but still delivers clear value)*

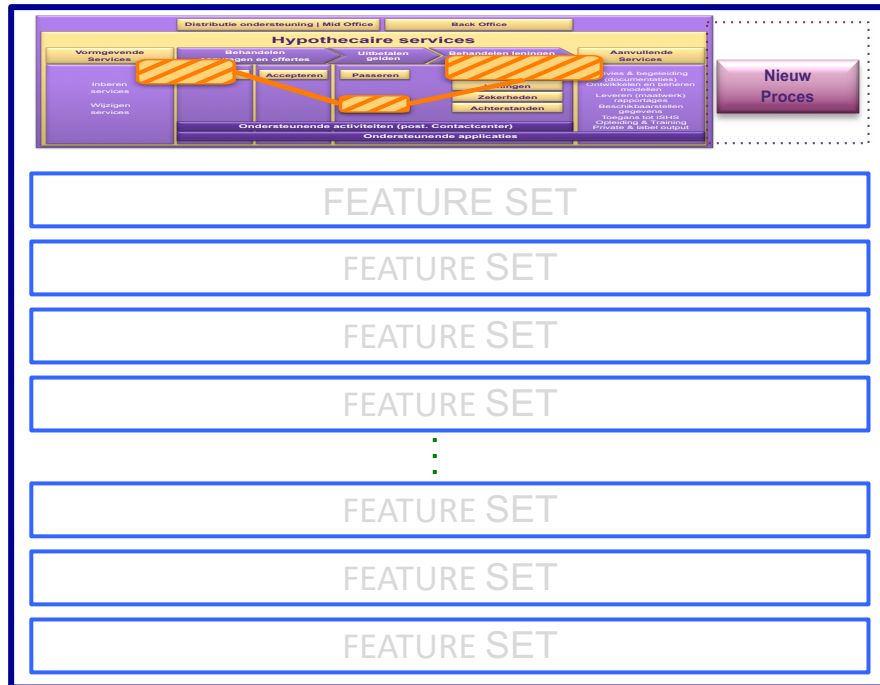

User Story

*Functionally or Technically
achievable (1 - 2 days)
to realise delta*
