KPI's

Agile Transformation started bottom up

Spotify Engineering Culture creates challenges for scaling to the non-Agile Philips Organization

Many processes are waterfall – rest of the organization and core processes are waterfall e.g., annual budgeting, KPI commitments and committed horizon planning

HR not Agile: Product Owners have a reporting line to their Tribe Leaders

Agile transformation is WIP; we are still in the middle of transition & clarity is needed on what is expected from Clan Leads, Tribe Leads & Product Owners

QBR Confidence Vote

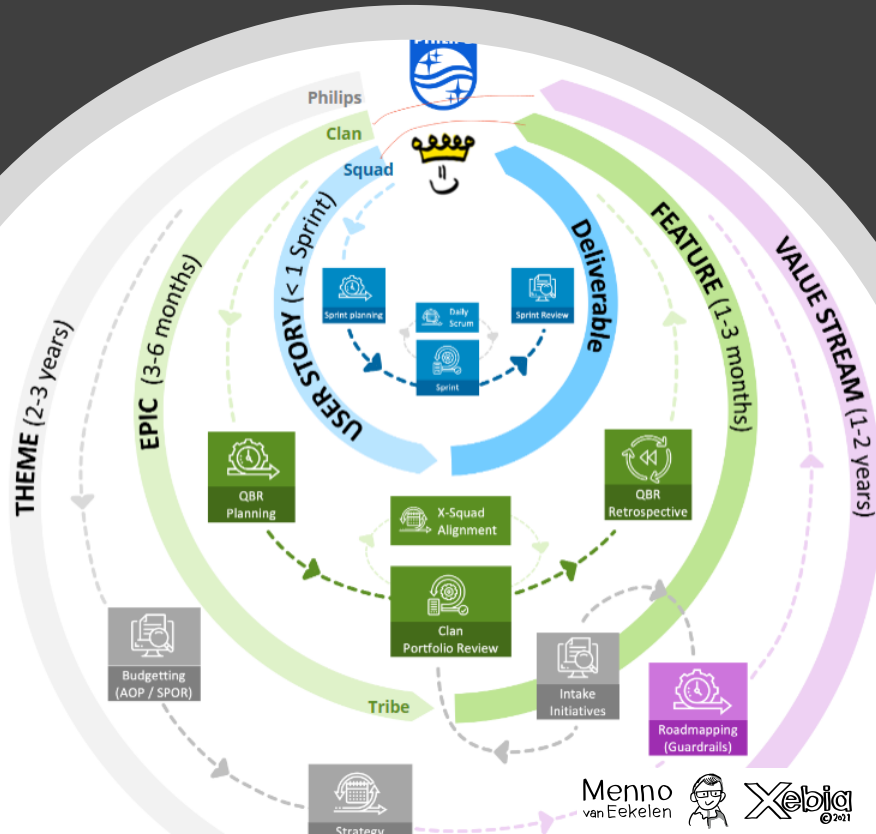

Agile team based org

Product Owners Drive Value Creation

Successful agile organizations empower employees to obsessively focus on creating happy customers and deliver value to those customers.

With a clear purpose and vision teams can autonomously focus on the right priorities –learning and experimenting along the value delivery journey.

1. **Product Owners take the lead in portfolio management** and squads can work autonomously in alignment with DMEC priorities and can relate their work to the customer and/or business value. All aligned with the DMEC Strategy.
2. **Customer insights driven approach** underpins development of all products & services.
3. **Squads adopting data driven test & learn cycle.**

[illegible]

Ideation | Exploration | Refinement

Alignment | Planning

A. DISCOVERING - DMEC Strategy

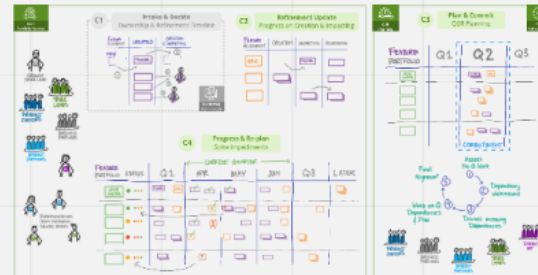

Delivery | Deployment

B. ROADMAPMING - DMEC ROADMAP

C. DEVELOPING - CLAN / TRIBE Alignment & Planning

D. MEASURING - SQUAD Delivery

DMEC Portfolio Management Framework

Version 8

DMEC Portfolio Management Framework

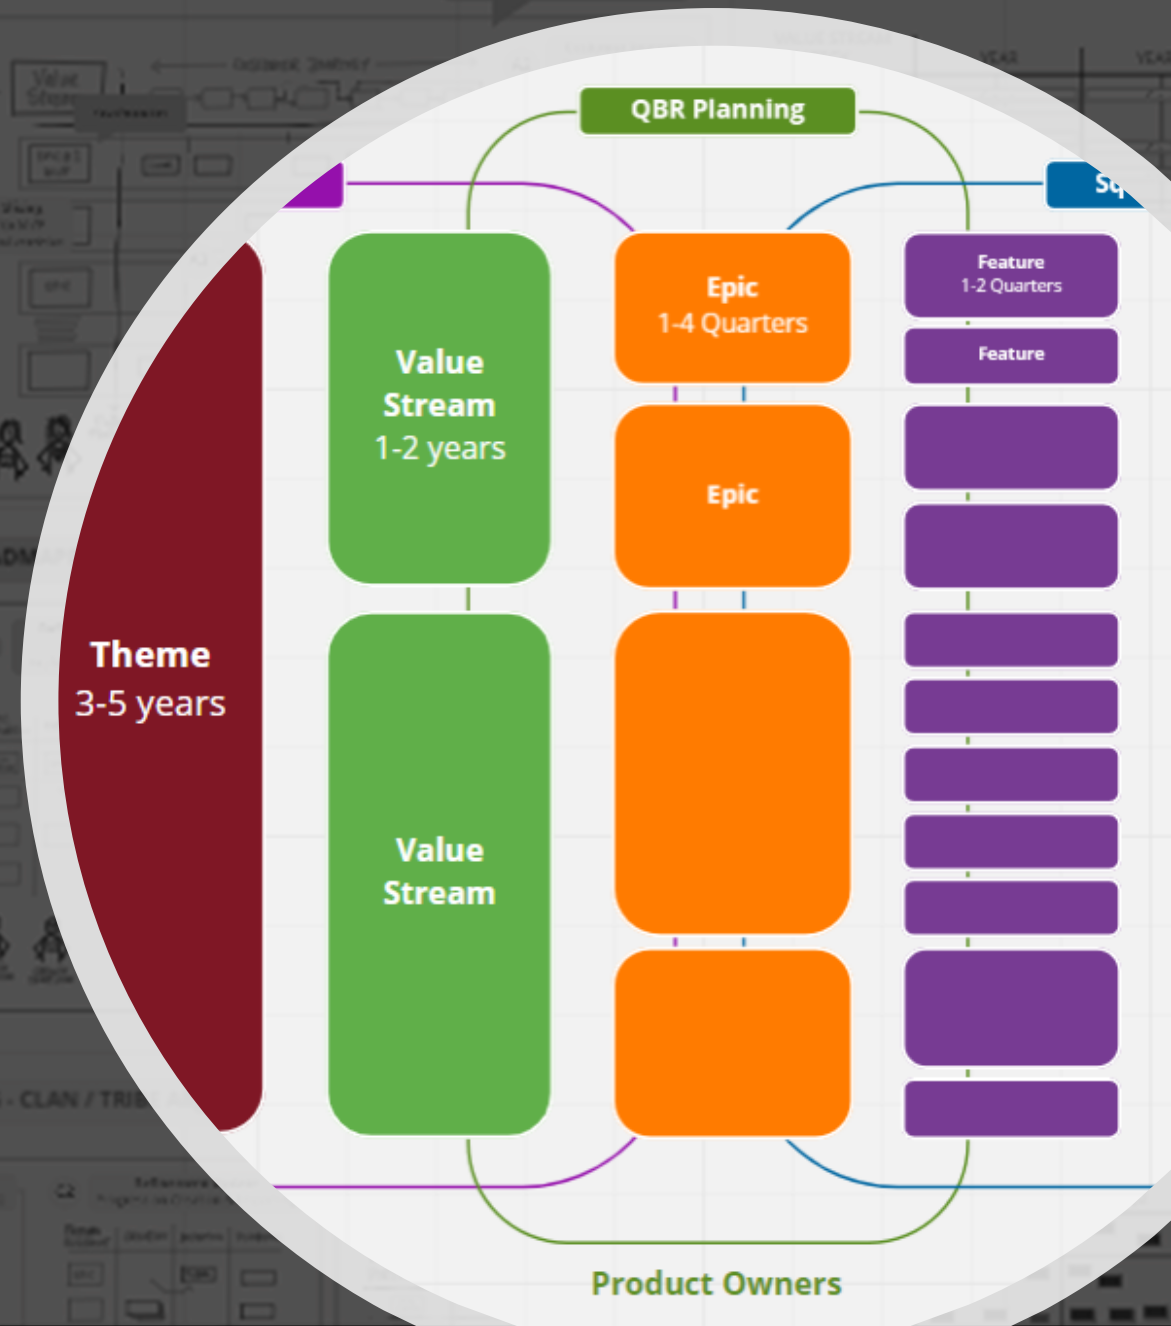

Version 8

Portfolio Management transformation = Change Management

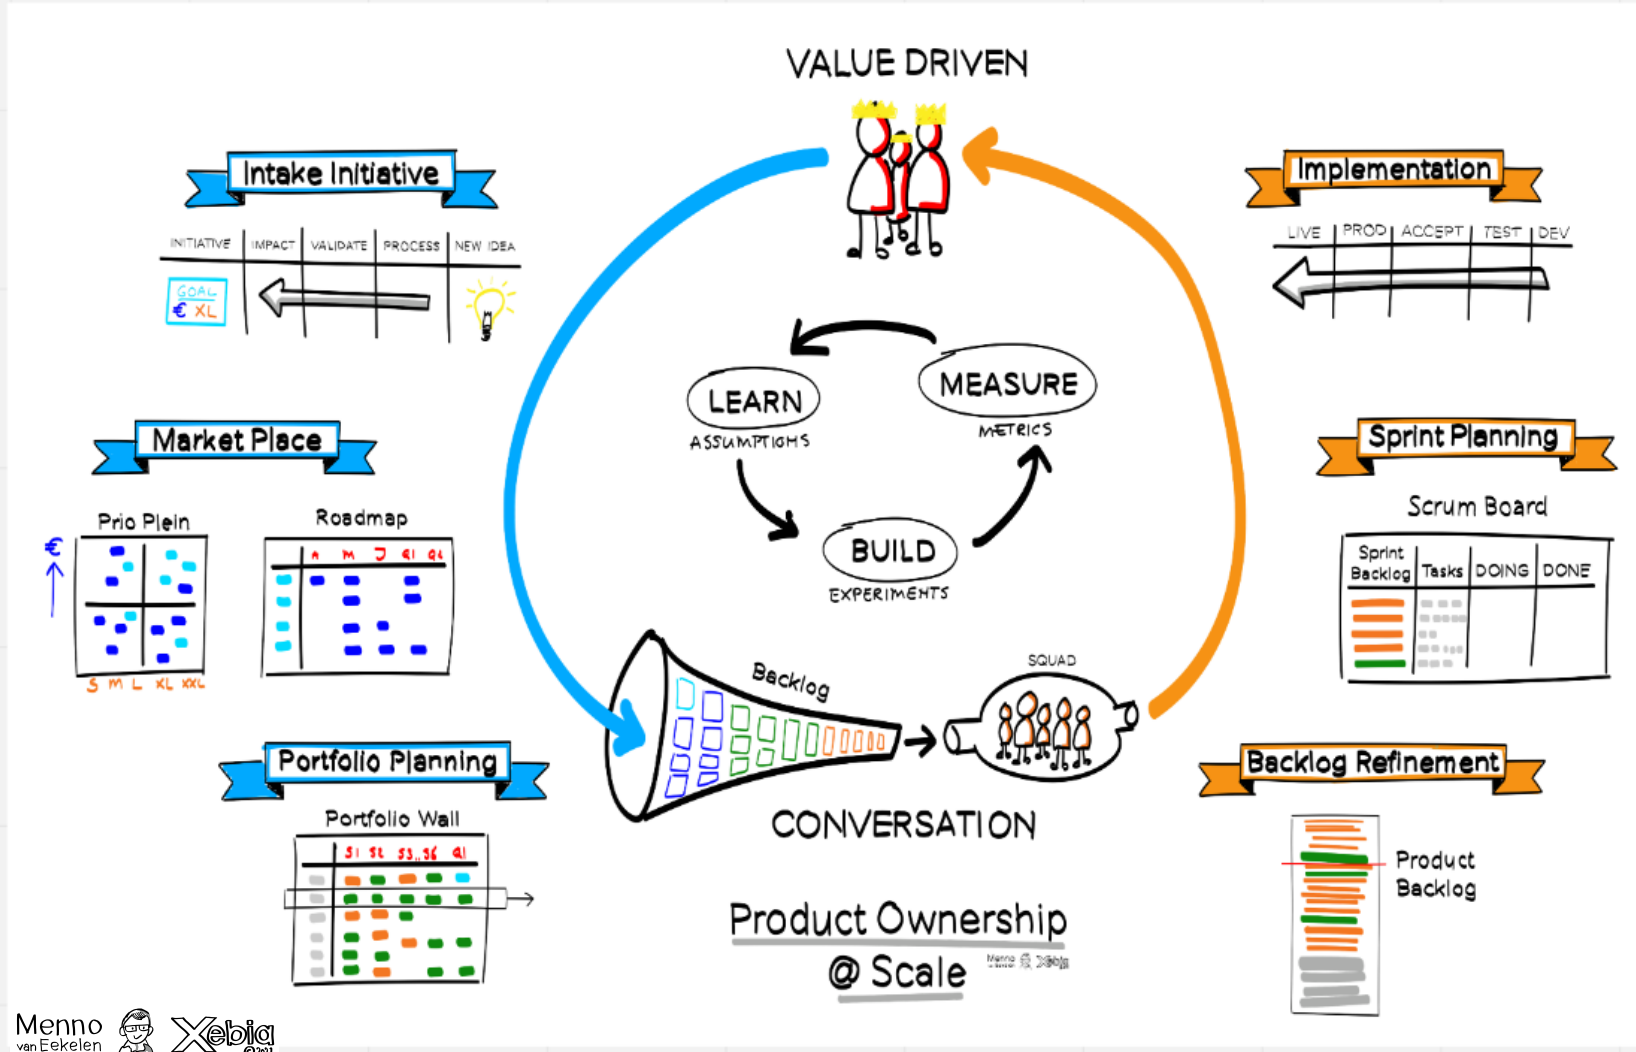

As a Clan Leader I want to know how the KPI delivery is progressing considering the budget and recourse capacity provided

As a Tribe Leader I want to know if we are delivering on the commitments made to our Markets and Customers

As a Product Owner I just want to create the best customer experience with our product

Value Circle = Product Ownership @ Scale

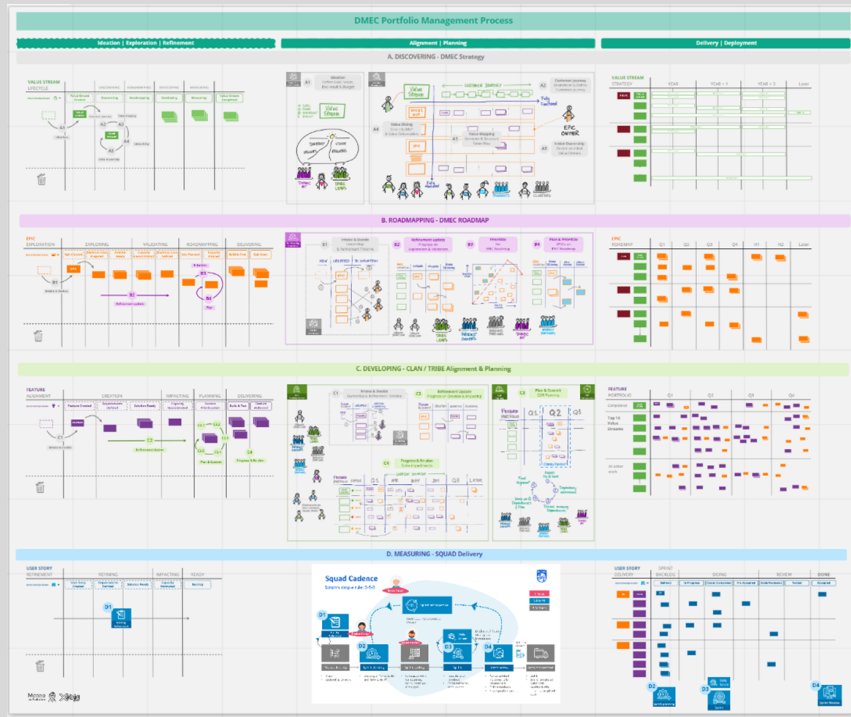

Product Owners Drive Value Creation

Even if we have **autonomous teams that rapidly deliver value** to our customers, we still need to **align and agree** upon a couple of long-term strategies.

To make good decisions without resorting to gut feelings and chance, teams need access to **information and context**. This is usually achieved through **transparency**

Replacing bureaucracy and slow processes with autonomous fast teams doesn't come for free. The oil that makes the engine run is **communication – lots of communication**.

The Portfolio Management Process provides the transparency and alignment on various levels in the organization

Portfolio Management Framework Lessons Learned

Keep it Simple & Transparent

Idea > Refine > Plan > Deliver > Deploy

Onboard Leadership and make them your Ambassador

Create One Aligned Backlog to link strategy to delivery

Implement Quarterly Planning meetings: it will help to identify Gaps between Strategy and Execution (Feature)

Create Roadmap meetings to discuss new Initiatives and prioritization. (EPIC)

Make delivery on Value/KPI's and work in progress transparent -> Dashboards (Value stream level)
