

Press release

Delft - October 25, 2020

UV smart announces the launch of the D25. The first device for validated disinfection with UV-C light from Delft MedTech startup UV Smart.

UV smart's D25 can disinfect non-invasive medical equipment in 25 seconds.

The D25 is validated, certified (Medical Device, class IIa) and supported by clinical research. It offers an automated and consistent disinfection by means of the Impelux™ technology.

The Impelux™ technology works on the basis of UV-C light. This light ensures that DNA and RNA of microorganisms are inactivated, leaving them harmless.

With the D25, personal objects and medical equipment can be disinfected within 25 seconds. For example:

- Infusion pumps
- Thermometers
- Surveillance equipment
- Stethoscopes
- Communication systems (DECT phones, mobiles, tablets ...)

Together with our partners, UV Smart provides healthcare facilities all over the world with validated UV-C disinfection methods to guarantee a safer environment for patients and healthcare professionals.

UV Smart creates and provides validated, fast, safe and easy to use UV-C disinfection solutions to minimize the spread of sickening microorganism via (non critical and semi critical) medical instruments and devices within healthcare facilities.
