

Connected refrigeration – multifunctional integrated IoT sensor

Introducing Connect Monitor - Wellington's multifunctional refrigeration sensor and data logger.

Connect Monitor is a battery-operated device that senses and records up to two months of equipment data such as:

-  Internal temperature
-  Compressor duty cycle
-  Door swings
-  Asset location

Connect Monitor communicates through Bluetooth and is fully compatible with the Connect™ IoT ecosystem. It also includes marketing beacons for Apple iBeacon and Google Eddystone.

Combine with Connect™ Network for always-on, real-time data and monitoring, critical high-value products and customers.

Connect Monitor can easily be installed in any new or existing refrigerated appliance*. Requiring no external sensors and wiring, Monitor can be mounted inside the appliance cabinet, close to the door and in a good air circulation zone.

Retrofit or new equipment

Easy installation

Self-contained

Universal fit

5-year battery

Use cases

- Retrofit your non-connected cooler fleet to improve operational efficiency.
- Ensure proper temperatures anywhere by adding to portable refrigeration units.
- Ensure proper performance by including in temporary cold storage devices at events.
- Track location and ensure product quality by monitoring cold or frozen goods in transit.
- Verify product safety in cold rooms, and walk-in freezers and fridges.
- Lower costs, save time, and eliminate human errors by automating your HACCP monitoring and reporting.
- Monitor product quality by adding to food service cooled cabinets and equipment.
- Seamless, automated asset tracking of any cooled or ambient equipment.

*One Connect Monitor required per door. Special applications may require multiple Connect Monitor units per system.

Safety warning: Connect Monitor devices contain a lithium battery. This may be hazardous if incinerated or physically damaged. Used Connect Monitor devices should be responsibly disposed.
