

ESI Cordless Handset III

Flexibility for Mobile Environments

If you're always on the go...

You need to stay in touch and be accessible as you move around your workplace. To make sure you never miss an important call, use the **ESI Cordless Handset III**. You're always connected to your ESI system and its unique features.

It fits right in.

The ESI Cordless Handset III gives you the mobility you need, at costs you can afford. Thanks to the distinctive **Quick Switch™** feature, the ESI Cordless Handset III is convenient and simple to use with your desktop phone.

Built for the office.

The ESI Cordless Handset III employs advanced DECT 6.0¹ technology, operating on 1.9 GHz for maximum range with minimum interference from other wireless devices (including Wi-Fi). Additionally, the use of one or more repeaters extends the range, as users pass from "cell" to "cell" within a facility.

The functional, flexible, and high-performance ESI Cordless Handset III, like all other ESI phones, puts *you* in charge of your business communications.

We Make It Easy To Communicate

ESI power tightly integrated with cordless convenience.

- **One-touch access** to features such as voice mail, conference, hold, and transfer.
- **A shared voice mailbox** with your ESI desktop phone, so you have just one mailbox to check.
- **Eight programmable feature keys** to customize your ESI Cordless Handset III for quick access to frequently used features, such as live call recording, ESI's Virtual Answer, and door unlock.²
- **A large display** that shows voice mailbox activity, Caller ID³ data, and status indications for talk mode as well as the speakerphone, battery and muting of the ringer and the microphone.

Advanced DECT 6.0 technology.

DECT 6.0 technology gives your ESI Cordless Handset III high security, longer battery life/standby time, and crystal-clear audio quality, while minimizing or eliminating interference from Wi-Fi and other devices. Additionally, DECT 6.0 supports optional **repeaters**. Installing repeaters to overlap a base station's coverage will let you keep a call going as you move from one coverage area of your facility to the next (just as cell phone users move from "cell" to "cell"), as depicted in this diagram:

Seamless transition between desktop and cordless.

When you leave your desk to move around the workplace, press your ESI desktop phone's exclusive **Quick Switch** key. Immediately, all of your calls go to your ESI Cordless Handset III. When you return, press your desktop phone's Quick Switch key again and that phone resumes taking your calls. You can even select which phone rings when someone calls your extension.

Smarter access to power and connectivity.

It's easy to provide power to your ESI Cordless Handset III's base station. The digital model's base station is **phone line-powered**, while base stations for the IP model of the ESI Cordless Handset III uses Power over Ethernet (PoE).

Each ESI Cordless Handset III comes with a base station, belt clip, two rechargeable batteries, charger/power adapter, and wall plate. Each IP model also comes with an Ethernet® cable. Repeaters are sold separately.

Fully charged battery life:
Approximately 16 hours.

Recharge Time:
5-8 hours⁴

Standby Time:
Approximately 7 days

Approximate Range:⁵
w/o repeater: 175 ft.
w/ repeater: 320 ft.

Weight (inc. battery):
0.20 lbs.

Size, W x D x H (in.):
2" x 1" x 6"

1. Digital Enhanced Cordless Telecommunications. For details on this industry-standard technology, visit www.dect.org. 2. Door unlock capability requires installation of ESI Presence Management on system. 3. Requires Caller ID service from your telephone service provider. 4. If charged while in the handset. 5. Interference may result if cordless base stations are installed within 10 feet of each other. Ranges are approximate, and are dependent on each site's unique characteristics. Feedback may result if the ESI Cordless Handset III is within three inches of the ESI desktop phone.
