Obesity as a Disease: Innovative Approaches to Treatment

October 1, 2021

Live Webinar

The aim of this conference is to provide health care professionals with the knowledge and skills needed to support and treat patients who struggle with obesity and obesity-related comorbidities. Participants will gain an evidence-based understanding of obesity as a complex disease that is influenced by a complex dynamic of physiological and psychosocial variables. Upon completion of the conference, participants will leave with a basic skill-set that enables them to identify treatment strategies that goes beyond “eat less and move more.”

Weight Management Center

Topics to be discussed:

- Obesity Treatment Through the Life-span
