Brackets & Tubes

Precision engineered and manufactured by G&H[®] in the U.S.A.

The difference behind G&H[®] BRACKETS

By controlling the entire process from raw material sourcing to packaging & delivery, we assure quality manufacturing & exceptional service.

The feedstock is compressed under high pressure in the injection molding machine. This creates what is known as a "green" bracket.

6

The "green" bracket is 20% larger than the finished bracket.

"Green" Ceramic Bracket "Green" brackets are sintered (heated at extreme temperature) to our proprietary specifications. The bracket emerges reduced to its finished dimension. Metal brackets are then ready to receive a mesh bonding base which is brazed onto the bracket.

Ceramic brackets are complete after sintering as the base and bracket are formed as a single piece during the injection molding process. (Color-coding is applied after sintering).

Tack-welded metal brackets receive brazing paste in

Metal brackets travel through a brazing furnace to complete the brazing process.

Brackets go through a final finishing step giving them a smooth polished finish.

8

preparation for final brazing.

Then we quality check –

7

All brackets are inspected for quality assurance throughout the manufacturing process and prior to packaging.

To produce -

G&H[®] brackets that work seamlessly with our G&H[®] wires and elastomerics. Brackets, Tubes, Bands, Wires, Elastomerics –

mini**Prevail®twin** BRACKET SYSTEM

A POWERFUL, COMFORTABLE BRACKET SYSTEM

A mini twin bracket system with all the benefits of a full twin

miniPrevail[®]TWIN brackets are constructed of a specialized micro-grain surgical stainless steel metal injection molding (MIM) powder, for an inherently stronger, and more dimensionally accurate bracket.

See our video!

GHOrthodontics.com

miniPrevail®TWIN is available in: Slot size: .022 or .018 Prescription: Roth* & MBT* Hooks: 3's only or 3's, 4's, 5's

Actual patient wearing G&H miniPrevail® brackets.

*G&H prescriptions are not implied to be an exact version of any other system, nor do we claim any endorsement by the doctor.

G&H[®] Brackets Clinical Results

"miniPrevail brackets are high-quality twin brackets. The base and scribe lines make for easy bracket placement. The tie wings allow for easy tie-ins with multiple ligatures if needed, but are strong and comfortable for the patient."

-Howard Fine, D.M.D., M.M.Sc.

Pre-Treatment - 11 yrs 4 mos

Mid-Treatment - 12 yrs 2 mos

Post-Treatment – 12 yrs 9 mos

THE SELF-LIGATING BRACKET FROM THE MINIPREVAIL FAMILY BY G&H

The answer to achieve excellent, predictable treatment results in less time.

An INTERACTIVE self ligating bracket which uses a NiTi spring clip that is strong enough to deliver continuous and consistent forces while assuring tooth movement control. When using round archwires (up to .020") allows PASSIVE engagement during initial leveling and alignment to reduce friction and improve sliding mechanics. When using rectangular archwires (from .016"x.022"), becomes ACTIVE to provide effective torque and rotation control toward the end of treatment.

Aesthetic Brackets, Bands, Elastomerics, and Wires

A NEARLY INVISIBLE POLYCRYSTALLINE CERAMIC INJECTION MOLDED BRACKET

Agility Ceramic brackets are constructed of proprietary ceramic injection molding materials to ensure a stronger, and more dimensionally accurate bracket. Agility's brilliant translucency presents a totally aesthetic appearance throughout treatment. The unique bonding base design ensures superior performance and easy, conventional debonding. The unique "portals" in the base allow adhesive to circulate through the base, creating a secure mechanical bond.

" I love how you can hardly tell I'm wearing braces! I feel more confident to smile, plus they're comfortable."

Actual patient wearing G&H Agility® Ceramic brackets.

"The Agility Ceramic system provides all the characteristics one would look for in a high-quality ceramic bracket: aesthetics, ease-of-bonding, smoothness and strength. Thanks to the unique portals in the base, mechanical bond strength is enhanced yet the bracket is easy to debond. It is made in the U.S.A. and is cost-effective. I can't think of anything else one could possibly ask for."

- Howard Fine, D.M.D., M.M.Sc.

Buccal Tubes

Precision Manufactured By G&H® Orthodontics

Seamlessly working together with our miniPrevail® bracket systems

Our new miniPrevail®TUBE has been engineered with the patient and orthodontist in mind. Our distinct "crosshair" design takes the guesswork out of placement while the tube features offer easy wire placement and engagement. Finally, the low profile and sleek hook is designed for the utmost patient comfort.

*G&H prescriptions are not implied to be an exact version of any other system, nor do we claim any endorsement by the doctor.
