

INTRODUCING

BRAINSCOPE® ONE

REVOLUTIONIZING
BRAIN INJURY ASSESSMENT

The human brain is the most sophisticated machine in the world, deserving the highest quality medical care. BrainScope® One, a revolutionary FDA-cleared medical technology, gives urgent care physicians and staff greater assurance to objectively assess the full spectrum of brain injury, including concussion.

Using EEG based technology that is non-invasive for patients 18-85 years of age and for use within 3 days of mild head injury (GCS 13-15), BrainScope® One measures and interprets brain electrical activity and a patient's neurocognitive function, creating a panel of objective data – a powerful tool for urgent care physicians to make their clinical diagnosis. This is a prescription only product. Powered by revolutionary technology, BrainScope® One is easy to use and easily integrates into existing urgent care workflows, which leads to superior patient care, enhanced efficiencies and new opportunities for growth.

BrainScope One is not intended as a stand alone diagnostic or to be used as a replacement for a CT scan.
