

INTRODUCING

# BRAINSCOPE® ONE

REVOLUTIONIZING  
HEAD INJURY ASSESSMENT

Using groundbreaking technology to assess the full spectrum of head injury, including concussion, BrainScope One helps you determine whether an athlete is safe to play—quickly, confidently, on the spot.

- Helps determine athlete disposition, including need for ER visit.
- Immediate on-site assessment
- Efficient, accurate, objective, comprehensive
- Non-invasive EEG-based technology
- For athletes ages 18+
- For use within 3 days of mild head injury

BrainScope One is not intended as a stand-alone diagnostic or to be used as a replacement for a CT scan.

# MAKE THE RIGHT CALL WITH CONFIDENCE.

The award-winning BrainScope® One head injury assessment medical device uses state-of-the-art handheld technology and a proprietary disposable headset to help answer two key questions:

1. Is it likely there's a structural brain injury that would be visible on a CT scan?
2. Is there evidence of functional abnormality that's indicative of a concussion?

## IT'S A WIN, WIN, WIN

### Athletes

- Get objective answers
- Protect short- and long-term health

### Trainers and Coaches

- Objective assessment right after injury
- Confident return-to-play decisions

### Program

- Promote athletes' welfare
- Legal liability protection
