Appointment of Account Director

Coeus Software Ltd. welcomes Eshan Owarish as Account Director to boost sales

- *Experienced cloud transformation director joins from Trustmarque*
- *Mobile working solutions PoliceBox and Quvo well positioned for growth in 2019*
- *Experience PoliceBox yourself at the Police ICT Summit, 23-24th January 2019*

Middlesbrough, 16th January 2019: Coeus Software the leading provider of cloud-based, mobile workforce solutions for the public and private sectors, is delighted to announce the appointment of Eshan Owarish to the position of Account Director, in a move that reflects their accelerated growth as they begin 2019.

Eshan Owarish comes to Coeus Software from Trustmarque, a business unit of Capita PLC which delivers cloud transformation projects to both public and private sectors, where he was previously senior business development manager. Eshan is bringing an extensive knowledge of IT investments across both the public and private sectors to his role at Coeus, as well as a solid understanding of how a cloud-first solution can drastically transform working practices and processes.

Eshan joins Coeus at an exciting time as many segments of the public and private sector are actively seeking ways to digitise their business processes to support a truly mobile, secure and connected workforce. PoliceBox by Coeus Software is the UK's only secure and fully customisable mobile working platform built specifically for the police. Outside of the police, Quvo is Coeus Software's mobile working platform for all compliance-based private and public organisations, which offers a mobile working solution for a wide range of sectors, from government and defence to the blue light emergency and infrastructure services and manufacturing.

Of his new role Eshan says: "I'm so excited to be the newest member of the team at Coeus Software. There really isn't anything else on the market as transformative as PoliceBox and Quvo. While I'm already in the process of speaking to police forces across the country and growing our customer base, I am also thrilled to be working with our existing customers to help expand the solutions we provide for them. After a year in which the police force and its relationship to IT have been much maligned, I'm eager to join a company that is very much part of the solution, and I look forward to seeing what we'll achieve in other sectors 2019."

Coeus Software CEO Simon Hall commented: "Eshan has proved to be a very welcome addition to the company. We're really pleased to be able to bring on board someone from such a relevant cloud background as we make our cloud-first, mobile-first solutions available to police forces, public sector offices, healthcare providers and beyond. As technology continues to advance at such a pace it is vital that these sectors have access to the latest IT solutions to keep processes quick and integrated and avoid falling behind."

Eshan and the Coeus Software team will be at the Police ICT Summit 2019, so don't forget to visit stand Stand 6 in the Paris Suite where you'll be able to experience the latest PoliceBox update, dubbed 'Amicite', for yourself.

About Coeus Software

Coeus Software Ltd. is a leading provider of cloud-based, mobile workforce services for the police, health, social care and wider public and private sectors.

Their services have been specifically designed around the day-to-day needs of its customers. From frontline police officers to nurses and social workers, its products support and enhance the way its customers already like to work. This ensures they fit seamlessly into their work day to deliver tangible benefits from day one.

Coeus Software understands that every organisation wants to deliver on the vision of a truly mobile, secure and connected workforce, where paper-based processes, duplication of effort and unnecessary errors are minimised at every opportunity. Digitising highly embedded processes is not easy, and breaking critical services in the pursuit of a vision is simply not an option. Coeus therefore designs all of its services to be modular, easy to configure and fast to deploy. It doesn't 'rip-and-replace', instead it integrates with existing systems and business processes to bring legacy, mainframe-era IT into the mobile age within days or weeks, not months and years.

Coeus Software: The fast, safe and secure route to a genuinely mobile workforce.
