

## Market Segment: Industrial

### Applicable Subsegments:

- Billboards
- Crane and Crain Rail
- General Industry and Manufacturing
- Paint and Blast Booth
- Pulp and Paper
- Silos and Towers
- Steel and Foundry
- Warehousing
- Window Washing

### Applicable Solutions:

- Horizontal Lifelines
- Rigid Systems
- Single Point Anchors
- Vertical Lifelines and Ladder Systems
- Guardrail
- Access Platforms, Catwalks and Gangways
- Warning Lines
- Confined Space and Rescue
- Rescue and Descent

**Did you know...In general Industry, any leading edge that is four feet or higher than the surface below must be protected from fall hazards?**

**OSHA 1910.23(b)(1)**

Infrastructure and processes supporting industrial needs take many forms, but there is one concern that is consistent, fall hazards. As such, comprehensive fall protection plans and user friendly systems are imperative to your operation. Fall protection not only keeps your plant workers safe and your operation OSHA compliant, but it also helps to ensure your business is kept online.

Guardrail protects workers tfrom a leading edge while they perform maintenance on roof HVAC.

Foldaway Jibs provide workers a quick and safe system to perform maintenance in a foundry

There are standard maintenance procedures that are required to keep your operation running. Quite often these procedures require employees to work at heights where there is an elevation change of four feet. At four feet, the employer is required to provide proper fall protection per OSHA general industry guideline 1910.23(b)(1). In insutrial environments this scenario is common whether an operator is working on a platform, walking across a roof or climbing a ladder to get to where the operator needs to go to do their job. In all of these cases, fall protection is required. Diversified Fall Protection takes prides in understanding the user's requirements and operational procedures when designing a system for our Industiral clients. Our deep experience provides us with the perspective to recommend solutions that do not interfere with daily operations and at times, our systems deliver efficiencies that make their job not only safer but easier.

Industrial operations are know for demanding environments as the facility is often exposed to physical elements, tensions and corrosive chemicals. As such, it is imperative that a fall protection provider thoroughly understands the environment, engineering and operational considerations when designing the system.

Diversified Fall Protection's decades of experience in the Industrial market translates to safer environments and solutions that work for your specific operation.

*We are a complete turnkey provider of fall protection systems designed for the Utilities and Energy industry and have the years of design and installation experience in this market sector. Contact us for expert assistance with your fall arrest, fall restraint and fall protection safety requirements.*
