WorkSafe: Benefits Management Framework

CHALLENGE

WorkSafe required a consistent framework to identify and measure the planned benefits to be delivered. This framework would be used to report to senior stakeholders, ensure compliance and drive overall realisation of those benefits.

OUR APPROACH

Based on industry standards, and internal frameworks, MetaPM developed the benefits management process needed and integrated into the WorkSafe transformation program.

Collaborating closely with WorkSafe's internal benefits management team we then worked with senior stakeholders to identify and agree the planned benefits and their measures.

Benefits were also mapped to identify dependencies between them as well as to key project deliverables. This allowed the flow of benefits to forecast and potential risks identified and mitigated.

RESULTS

- The benefits management framework was developed with all key program benefits being identified, defined and assigned one or more measures.
- The overall framework was approved by the program steering committee and the WorkSafe executive team.
- Work was able to commence on implementing the ongoing reporting and measurement framework.
