HOW TO USE DELEGATE TO ELEVATE WITH YOUR MSP

CONSIDER THE TASKS YOU SHOULD DELEGATE TO YOUR MSP USING THE DELEGATE TO ELEVATE TOOL.

The Delegate to Elevate tool is designed to redirect the projects and tasks that aren't a great fit for the individual so they can excel in their role and focus their time on what they do best. When you use the Delegate to Elevate tool with your MSP, you can say "These are the tasks we are skilled at and have the capacity to do in-house, while these are the tasks that are outside our skill set."

- What tasks and projects is your internal IT team responsible for?
- What tasks and projects should you delegate to your MSP?
- What tasks and projects is your internal IT team exceptionally skilled at?
- What tasks and projects is your internal IT team not skilled at?
- What tasks and projects are time-consuming and distracting your team from doing what they do best?

LOVE TO DO AND ARE GREAT AT DOING	LIKE TO DO AND ARE GOOD AT DOING
DON'T LIKE TO DO AND ARE GOOD AT	DON'T LIKE TO DO AND ARE NOT GOOD AT

Is it time to consider delegating tasks to your MSP?
