

# Quick Guide To Your Automated Guided Vehicle System.

Enhance the efficiency of your  
internal transport tasks.

# Our Automated Guided Vehicles Process.

## To Customize your solution.

### Six Phases to Successful Automation

Consistent, recurring internal transport tasks are ideally suited for automation. By using our Automated Guided Vehicle Systems (AGVS), you can provide the foundation for enhanced efficiency and optimized processes. This foundation allows for reallocation of employee workload and ability to deploy effectively in other areas. Jungheinrich is your perfect partner for the planning and implementation of AGVS. We deliver everything from a single source.

When we tackle a project, we proceed according to a tried and tested system. This system consists of six phases. As your automation partner, we are dedicated to ensuring transparency and clarity for you in every step.

We never lose sight of the overall process and the individual challenges it poses. You can rest assured that we will always keep you up-to-date.

### Your benefits:

- Customization to your tasks and environment
- Simple integration into existing processes and systems
- High safety levels thanks to a comprehensive vehicle safety system
- Reliable transport with precise navigation
- High flexibility concerning layout changes
- No damage to transported goods and peripherals thanks to extensive safety sensors
