

RIGHTLINE™ LIFT TRUCK ATTACHMENTS

Rightline Equipment, Inc. designs and manufactures premium quality lift truck attachments to increase material handling productivity. Please contact your local Cat® lift truck dealer for assistance with your application requirements.

CLAMPS

Rightline offers world-class clamps for whatever product you transport—from bale clamps to drum clamps, razorback clamps and beyond. Rightline clamps combine safety, performance, and durability from raw materials to finished product. Side shifting models have the additional ability to laterally position the arms or the entire load for faster and more accurate lifting and placement.

FORK POSITIONERS

Fork positioners allow drivers to move the forks hydraulically without leaving the seat. Side shifting models have the additional ability to laterally position the arms or the entire load for faster and more accurate lifting and placement. Rightline's top-notch fork positioners are engineered and built in the USA and infused with care and quality from beginning to end.

LOAD STABILIZERS

Rightline offers both hold-downs and vertical load stabilizers to help the wobblest loads get where they're going. Rightline hold-downs allow you to safely and efficiently handle virtually any stackable products without the need for pallets, and vertical load stabilizers are ideal when transporting unstable loads such as soft drinks, malted beverages, bottled water and empty containers. Load stabilizers secure pallet loads, allowing drivers to operate faster and more efficiently. They are especially valuable outdoors and in facilities with irregular floors.

MULTIPLE-LOAD HANDLERS

Rightline double-block handlers offer two-carriage productivity to your block or brick handling applications. Double-block handlers allow your driver to efficiently transport double the cube loads without the need for pallets. Drivers can position two carriages to effectively lift, transport, separate or unite double cube loads efficiently and without pallets.

Rightline single/dual pallet handlers can lift one pallet alone or hydraulically extend the outer forks to engage two pallets side by side. The pallet handler can retract for a slimmer width, enhancing truck maneuverability when carrying single pallets.

SIDE SHIFTERS

Rightline side shifters are recommended for nearly all lift truck operations. Side shifters allow drivers to laterally position the attachment arms or an entire load for faster and more accurate lifting and placement. The added versatility eliminates excessive maneuvering and increases driver efficiency. Rightline's superior shift power, cylinder protection, and frame strength make its side shifters powerful and durable in the toughest applications.

FORK BAR ROTATORS

Rightline fork bar rotators add the versatility of powerful 360 degree rotation to your standard lift truck. Fork bar rotators are widely used in agriculture, recycling, manufacturing and general industry. Operators can invert bins and specialized containers in addition to handling standard lift truck loads. Rightline has eliminated the weak points where other designs fail.

FORWARD BIN DUMPERS

Rightline forward bin dumpers multiply productivity in agricultural and industrial applications. They lift, grip, and spin bins through a 135 degree arc to empty contents with single-lever actuation. These dumpers are also designed to increase visibility, net truck capacity, and ease of service.

PUSH PULLS

Rightline push pulls are the perfect solution for operations that must handle both slip-sheet and mixed format applications. With numerous patents pending and several design advantages, push pulls help increase durability, improve visibility, and dramatically lower operating costs..
