

Property Access Control Security Suite [Starter System]

Facial Recognition As They Enter the Front Door

As a casino, your primary goal is to protect your assets and minimize risks to your business. Your venue must keep a watchful eye for patrons who pose risks to your operation, whether they cause financial harm or bring drugs and/or violence onto your floor. Stop unwanted patrons from entering and causing uncomfortable situations quickly, so you can get back to pleasing high-value patrons.

Protecting your casino right at the entrance will:

Help you identify and verify your customers

Empower your employees to identify suspicious activity

Improve your guest experience by creating a safe environment

Casino Security Challenges

Protecting your casino comes with a number of challenges related to both employees and customers. You need to be able to respond quickly in order to prevent these things from happening.

Theft and Fraud Prevention

Casinos are like banks, with cash changing hands all over the property. So it's essential to monitor patrons and employees. Power your surveillance and video system with AI and analytics to make it easier to re-identify known or suspected cheaters and deter theft.

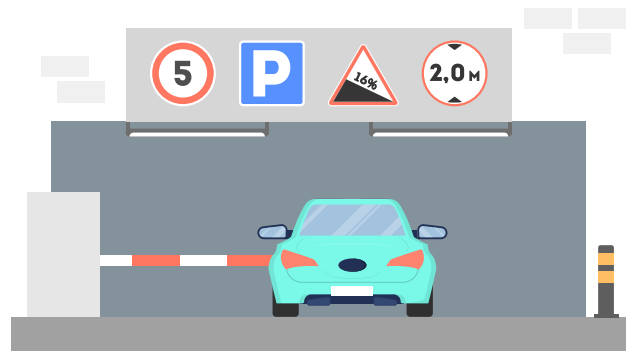

Guest Monitoring

Patrons don't always exhibit the best behavior in casinos and resorts. You need systems to quickly identify individuals from previously logged incidents and log guests' activities including crime, pickpocketing, and/or verbal and physical altercations. Facial recognition technology automates the process of identifying repeat offenders and VIPs alike.

Evidence Gathering

If a security or safety breach does happen, your casino must be able to quickly investigate, especially if the information will later be used in court. Real-time and historical monitoring provides valuable insights and can be confidently tied to a facial fingerprint, confirming the individual's identity.

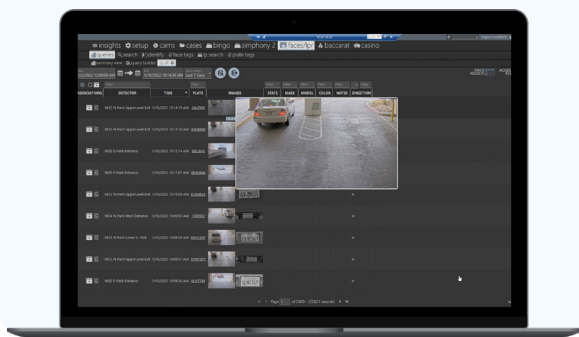

Property Access Control Security Suite Products

Facial recognition technology has become so advanced that it's far better and faster than an old-school security guard on the lookout. Technology provides a prime opportunity to automate and modernize your approach to safety and security. The eConnect™ Property Access Control Security Suite offers new layers of protection for your casino. Quickly detect banned and excluded people — regardless of whether they're thieves, money launderers, or pickpockets — before they commit another crime. With [facial recognition](#), you can recognize an unlimited number of individuals, good and bad.

modernize your
approach to safety.**

License Plate Recognition (LPR)

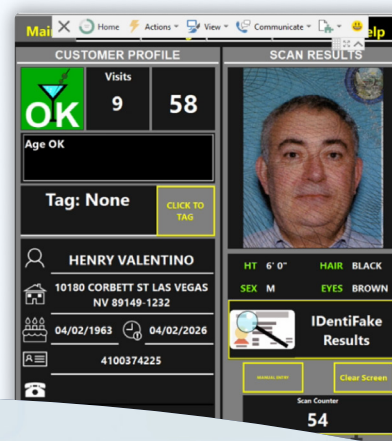

LPR has been around for years, but the eConnect system brings it all together with data and inputs from myriad other sources. It enables your system to perform patron screening from the garage or parking lot with strategically placed cameras to read all vehicle license plates. Patrons and their friends can be associated with one or multiple vehicles, enabling alerts of all types upon arrival.

Entryway Screening with eClear® ID Check

Enhance patron safety at the door with a more controlled entrance setup. This solution can include facial recognition cameras and rapid health check systems including vaccine validation checks. eClear is a camera with or without a screen for patrons to look into for face-matching and identity verification. The system also has a guest-counting feature to manage your venue's traffic flow. Let eClear AI check IDs and more effectively manage your front door.

Identity Management — Know Your Customer (KYC)

You don't know a customer's worth until they are in the system, but many gamblers intentionally stay under the \$10,000 winnings threshold to avoid being reported on. Identity management uses face-matching to recognize and track customers so you can learn about them, from the frequency of their visits to their gaming value.

Differentiating Features

eConnect stands alone with a fully integrated video and data solution, with a few core features to make the Property Access Control Security Suite stand apart from other similar solutions. More information from the eConnect system helps you make the best decisions.

Mobile Alerting System

Any workstation connected to eConnect's products is capable of receiving real-time push notifications, alerting your entire team to vital issues whether they're on-site or on-the-go. Mobile alerts integrate with your existing tracking systems, making them equally effective for issues ranging from preserving self-exclusion to flagging large purchases.

Self-Exclusion Module

State regulators must provide an option for those who wish to self-exclude to do so, helping to ensure that they do not game. eConnect mitigates your venue's risk, allowing former patrons to self-exclude from your casino remotely. Problem gamblers get the accountability they need, so you don't have to be the bad guy at the door — or, worse, face major fines.

eConnect University (ECU)

Get access to our customer-exclusive knowledge base. Learn about the latest security risks and mitigation strategies on demand from eConnect pros. Individuals can register for ECU at no additional cost and join 2,500 other certified professionals across the globe.

Supported Integrations

Modern IP 4K and
1080p+ cameras

Major video
management systems

ID scanners and
third-party data sources

Major LPR camera
manufacturers

Turn on integrations right away thanks to plug-and-play features. Our Property Access Control Security Suite ties all systems together to provide key insights and help YOU make better decisions for your business.

All the Hardware You Need, Included

The eConnect Property Access Control Security Suite comes complete with a robust server to accelerate image capture and display, as well as a set of cameras to accommodate your entryway setup.

About eConnect

Headquartered in Las Vegas, eConnect is a global leader in intelligent software solutions that automate processes in the gaming and hospitality industries. We integrate our products with all major gaming, hospitality, and surveillance systems, providing AI, data, and video analytics to improve your business efficiency and profitability.

eConnect software is continually evolving, and we're committed to providing the best solutions for you and your business. With a presence in the United States and Asia, our software applications are connected to more than 300,000 cameras in casinos, resorts, nightclubs, restaurants, stadiums, and airports.
