

Global Collection Kit Management

IBX provides a complete biomaterial planning and collection strategy including; customized sample collection kits, consulting, design, logistics, project management and storage of the sample collection process

End-to-end global collection kit management

Protocol-Specific Kit Consulting

Our sample advocates collaborate with you to assess and interpret protocol specific requirements to create a customized collection kit solution.

Custom Kit Design

We offer flexibility in our kit designs to match your individual study needs, creating a customized collection kit and tailoring the requisition forms, sample barcode labeling, and laboratory manual based upon the specific requirements of the sample collections.

Site Training

We are experts in defining kit specifications, sharing best practices and providing site instruction on sample collection procedures and shipping requirements that meet IATA regulations.

Project Management

Our project management team has expertise in sample management, addressing all aspects of your kit requirements and serves as a liaison for project metrics and governance. Working with you to establish project timelines and KPIs and providing the required monitoring and reporting of sample inventories. Managing your budget, informed consent, and data as part of the integrated process.

Collection

Processing & Extraction

Storage

Logistics Oversight

We provide the technological solutions and project management oversight for all aspects of collection kit ordering and logistics. This ensures timely kit distribution to global clinical sites, inventory tracking, expiration monitoring, and reordering of kit supplies via an intelligent, web-based sample management system. We ensure appropriate sample temperatures and a complete chain of custody is maintained on your sample inventory.

Tailored collection kit solutions

Optimizing collection kit design and management allows you to maximize downstream sample asset utility. Our sample management specialists partner with you to develop tailored collection kit solutions and provide expert project management of this process to meet your research objectives.

Comprehensive Sample Collection Kit Management Process

IBX is the benchmark in sample management. Our expert staff, state-of-the-art biorepository facilities, high quality processes and advanced technology support you in optimizing the value of your sample assets.

Our project management team works to ensure the absolute integrity of your samples through strict adherence to GxP guidelines and complete compliance with global sample management regulations and Good Storage Practices. Rest assured, our collection kits are manufactured under cGMP conditions. Regularly scheduled audits ensure that facility inspections, lot control procedures, material expiration management and collection kit standards meet the highest quality assurance criteria.

Kit production and clinical support services

- ✓ Customized sample collection kits
- ✓ Bulk supplies
- ✓ Requisition forms
- ✓ Laboratory manuals
- ✓ Sample shipping guides
- ✓ Shipping supplies
- ✓ Barcode label design

OUR SIX STEP COLLECTION KIT MANAGEMENT PROCESS INCLUDES:

Consulting

Design

Supply

Training

Management

Reporting
