kuberre systems

Quantitative **T**echniques in **Py**thon

(Cutie-Pie) Data science and analytics optimization platform. Most organizations have tools that allow teams to write/update models with redundant access to required data sets. QTPy turbo-charges any data science operation.

QTPy

- **Virtualize**
- **Simplify**
- **Collaborate**

Special Value to REFINITIV Customers

1 MarketQA Customers

Relying upon macros & custom processes native to the product

✓ **Replicate - Test - Deploy** customizations you depend in MQA safely and easily over to **QTPy**.

✓ **Migrate to QAD** safely and add new cutting-edge capabilities including:
- Speed of processing
- Simplicity when adding new data sets
- Improved team collaboration

2 MarketQA Customers

Employing methods of managing/analyzing data outside of the product

&

3 QA Direct Customers

Who have already migrated and would like to add-value to the service.

✓ **Realize** new value leveraging the performance benefits of **QTPy**.
- Pair your existing modeling tools with **QTPy** for simplified access to data sets
- Let **QTPy** Data Virtualization remove immense latency from your current operation
- Add new internal/external datasets quickly and easily
- Build reusable factors as building blocks to de-risk and accelerate new model development

What will QTPy to the future of your data operation? Reach out to us and the Kuberre team will be happy to get specific about how we will add transformational value to your specific operation.
