

## Go to your happy place for compliance management

**Whether you're tracking adherence to ever-changing regulations or establishing internal policies and procedures, maintaining compliance is essential to the workings of every financial institution. When each department is managing compliance manually on their own, your organization is more vulnerable to costly errors.**

**Designed by former compliance officers and supported by professionals with extensive industry experience, Ncomply was built with your organization's needs in mind. Our integrated software and services help to ensure comprehensive, continuous exam readiness.**

**Ncomply** provides your team with:

### **A user-friendly regulatory library that's updated in real time**

The Ncomply regulatory library comprises nearly 1,500 guidance documents from federal and state regulators, as well as over 6,000 rules, laws, standards, agreements, and related information pieces — all updated daily, for the most current compliance information. Our search and filtering tools help you find resources with ease.

### **A document manager with unlimited capacity and broad capability**

Our document manager provides a centralized repository for compliance-related documents such as policies and procedures. With the capability to upload and store unlimited documents, as well as sort and search with pre-filled and customizable filters, you can stay organized and exam-ready at all times.

### **Robust reporting for total exam readiness**

If it's not documented, it didn't happen. With Ncomply, you can track cost breakdowns for changing regulations, timelines for regulatory change implementation, relevant information on policy management, customer complaints and impacts, and due dates and policies for review/approval to present to stakeholders, board, management team, and examiners.

### **Custom automated alerts that keep everyone in the know**

Automated alerts give your team the ability to conduct instant analysis of regulatory change impact. You can customize alerts to include links to updated information (such as Federal Register summaries, deadlines, and tasks) to define a clear path to action for stakeholders.

### **Centralized communication for collaborative plan management**

Our project management dashboard tracks plan progress and automates reminders, task assignments, and information requests, keeping your compliance team accountable and aligned without endless emails.

### **Expert support and services designed around your needs**

Our support team works with you to install and configure your software so your team can implement quickly, then offers ongoing product enhancements and updates to help your organization stay current with compliance requirements. We also have certified partners that can support your team with a fully integrated compliance help desk.

### **Key Features**

- Expert support and services
- Federal and state regulatory library that's updated daily
- Customizable user management settings
- Alerts for regulatory changes, deadlines, and action plans
- Complaint management
- Document manager
- Centralized communication
