

BESPOKE PLASTIC

If you cannot find what you need within our off-the-shelf range, we will work with you to design your own individual product. Our in-house expertise in the creative, technical and manufacturing areas will ensure that your products not only look good but are innovative, commercially viable and work on your manufacturing line and through the supply chain to your customer.

EMBOSSING, DEBOSSING, ETCHING & SURFACE TEXTURING

Details such as logos or other artwork can be applied to your bespoke pot. We use a variety of depth & texture to make your brand stand out on shelf in place of a secondary label.

COLOUR & TINT

Any colour or tint can be applied to match your branding & is added before production, this can also be applied for large quantities of our off-the-shelf products.

SEALING

Bespoke products can be designed to have a sealing solution that fits your machinery, from heat sealing, screw top to tamper evident sealing. A few of our off-the-shelf products can be adjusted during production from a flat lip to an SP400 -screw or press on hinge-guard/Jaycap fitment if needed.

MATERIAL SELECTION

Material selection and use of additives can achieve higher barrier properties to protect & improve shelf life or allow products, including PET to be hot filled at 80 °C.

CLOSURES, LIDS, POURERS & SPOUTS

Perhaps the quickest way we can get you bespoke packaging is by using one of our off-the-shelf pots and creating a bespoke lid with your logo or artwork embossed on it or unique pourers or spouts. Closure designs options to complement our glass products.
