

# What “Native” means for Salesforce DevOps?

Native is the ultimate marker of **security**, **data integrity** and **ease of use**. Flosum is the native Salesforce DevOps solution.

**100%** covered by Salesforce security protocols

There’s no need to create additional blacklists or other safeguards. If you trust Salesforce, you can **trust Flosum**.

Exists entirely **within** Salesforce instance

Your data is safe in movement or at rest. You have **sole and total control** and visibility.

Same **UX** as your Salesforce Instance

Deliver programmatic and declarative language and easily resolve code conflicts within a **UX you know**.
