

Hospice Triangle of Care

Having a plan of care roadmap in place for each of your patients is the key to delivering better health care. KanTime is the only hospice software solution that has this built-in roadmap, making healthcare delivery highly integrated and consistent for your clinicians and your patients.

Within the KanTime solution we have the Triangle of Care:

- The Start of Care Assessment **CREATES** the Plan of Care
- The Plan of Care **DRIVES** the Follow-Up Visits forcing documentation on every IDT Problem
- Associated IDT Problem documentation is automatically **PUSHED** to the IDT Meeting
- Conditions of Participation and Conditions of Payment are met creating a closed Triangle of Care.

The Benefit:

No more prep-work for IDT Meetings.

Everything you need is automatically pushed to the IDT Meeting.

Worrying about Medical Review Denials and Hospice Survey Deficiencies are a thing of the past.

KanTime's Triangle of Care – How **Better** Happens.
