

Site Security

Developing and maintaining adequate levels of project site security benefits all interested parties such as workers, contractors, and owners. A proper security plan can help reduce theft and restrict unauthorized entry into the project.

Security requirements can vary based on the project's size, location, and complexity. Contractors can be a target for thieves looking to steal fuel, copper, tools, and equipment. Thieves may target almost anything that can be sold quickly. Unfortunately, construction theft can be internal, so be sure to apply the basics when it comes to protecting the project from your employees and other contractors on-site.
