

DRVS EHR Plug-In

SEAMLESS WORKFLOW INTEGRATION FOR AZARA DRVS WITHIN THE EHR APPLICATION—ALLOWING HEALTH CENTERS TO SIGN IN TO DRVS WITHOUT HAVING TO EXIT THE EHR

Health centers who desire access to their DRVS data at the point of care can implement the EHR Plug-In to avoid digging through the patient chart while signing on to multiple systems. The Plug-In also gives users quick access to the actionable information found on the DRVS Patient Visit Planning report and is used by clients to address care gaps and remind providers of other items required for the patient.

Key Benefits

- Allows direct access to patient information such as overdue vaccinations, screenings, and a variety of other clinical alerts while in the patient electronic chart.
- Provides transparency into open referrals—allowing the provider to view outstanding referrals and assist the patient in progressing toward completing the recommended activity.
- The RAF Coding tab helps simplify providers' need to annually maintain the payer's awareness of patients' chronic conditions.
- Gives medical staff a view into the Care Plan, designed for the patient by the Care Management team, without having to log in to two systems.*
