

Restart & Revenue Recovery

Solutions to Support a Safe Return to Patient Care

Need help deciding when and how to start in-person care?

Many Hospitals, Health Systems, Physician Groups & Medical Practices are navigating the line between recouping revenue, rehiring and keeping their patients & staff safe. Other challenges health care professionals are facing include:

Rescheduling of canceled and backlogged procedures

Ability to monitor the prioritization and rate of incoming patients

Protecting employees

Following the guidance of CDC, federal and local health officials

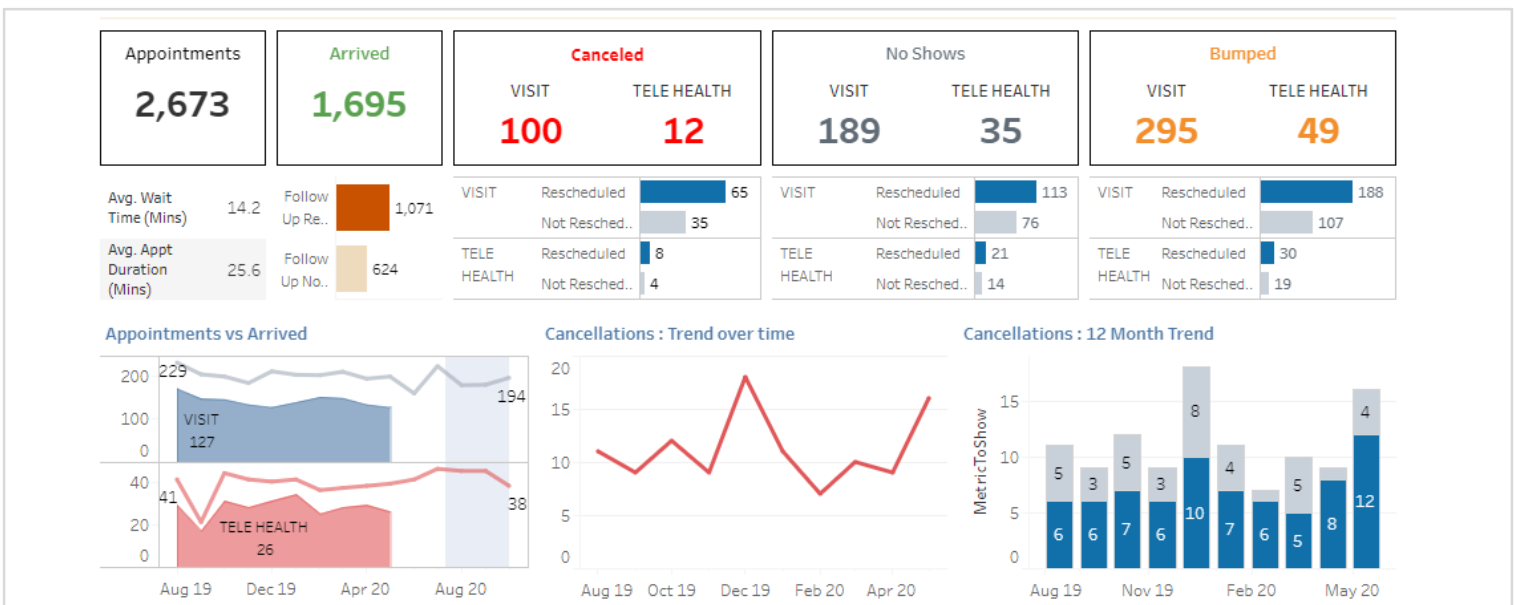

Securing trust from the people in your community to seek out the care they need

New analytics are required to guide decisions on when/how to re-open facilities, efficiently track and manage scheduling as well as efficiency.

Fusion Scheduling Dashboard

Restart & Revenue Recovery

Solutions to Support a Safe Return to Patient Care

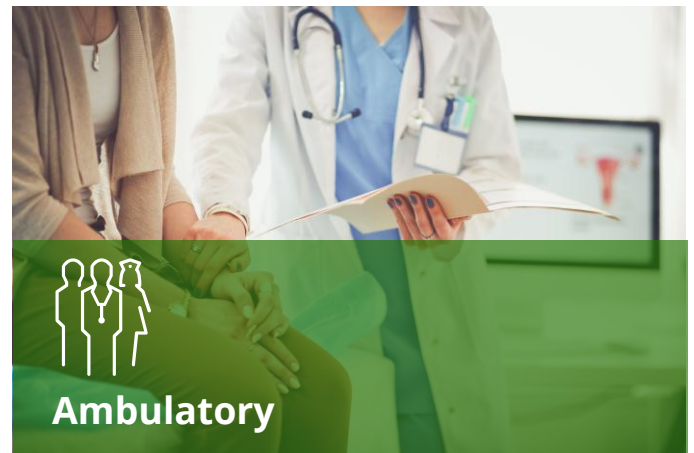

- Block utilization scheduling optimization
- Perioperative efficiency metrics
- Staffing optimization
- Prioritization algorithms (i.e. MeNTS scoring)
- Employee testing & tracing

Provider scheduling optimization ■

Staffing optimization ■

Customized algorithms ■

Employee testing & tracing ■

- Improve communication with patients across multiple channels
- Sentiment analysis
- Pre-procedure or pre-appointment testing
- Ensure patient satisfaction

Based on our work with a large regional health system, Fusion has developed comprehensive analytics to optimize elective surgery and procedure volume. COVID-19 precautions essential for the safety of patients, providers and staff have increased turnover time and put additional requirements on preparation and follow-up.
