Warranty
Amphenol Advanced Sensors warrants equipment of its manufacture to the original buyer against defective materials or workmanship, for a period of one year for the sensor tip and two years for the rest of the product, from the date of shipment. The sensor element and calibration are not covered by this warranty.

Calibration
All Amphenol Advanced Sensors RH/Dew point and Temperature Products are fully tested and calibrated in accordance with the National Institute of Standards and Technology (NIST) prior to shipment. This is the highest quality calibration standard available.

Power Requirements
12–30 VDC power supply (furnished by the customer).

Specifications

Environmental Conditions
Operating Range: –40°F to 140°F (–40°C to 60°C)
0-99% RH non-condensing
Storage Temperature: –67°F to +185°F (–55°C to +85°C)

Temperature
Sensing Element: Band-gap sensor
Signal Outputs: 4-20mA, 0-5V or 0-10V (User selectable)

Psychrometrics - Dew Point / Enthalpy / Wet Bulb
Signal Outputs: 4-20mA, 0-5V or 0-10V (User selectable)

Space (Wall Mount) Range
Dew Point 40° to 90°F (4.4 to 32.2°C)
Enthalpy 0-50 BTU/lb (0-116.3 kJ/kg)
Wet Bulb 40° to 90°F (4.4 to 32.2°C)
Dry Bulb 40° to 90°F (4.4 to 32.2°C)

Duct/Outside Air Mount Range
Dew Point –20° to 120°F (-28.8° to 49°C)
Enthalpy 0-50 BTU/lb (0-116.3 kJ/kg)
Wet Bulb 0° to 100°F (-17.8° to 37.8°C)
Dry Bulb –20° to 120°F (-28.8° to 49°C)

Contact Information
To contact the factory, use the following information:
Amphenol Thermometrics, Inc.
967 Windfall Road
St. Marys, PA 15857
Web: www.amphenol-sensors.com
Telephone: +1 814-834-9140
Fax: +1 814-781-7969

Accurate @ 77°F (25°C) at 40-90%

Humitrac products are designed to be used with power from building HVAC control systems.

Certification
CE Marked
Complies with EMC Directive 2004/108/EC and 2006/95/EC.
IP 42 rating for Duct Mount and Outside Air Transmitters.

Installation
For your convenience, the transmitters can be mounted using the base as a mounting template (see Figure 1 or 2).

Wall Mount
Locate the transmitter where it will be exposed to an unrestricted air circulation that is representative of the average humidity and/or temperature of the controlled space. Avoid locations where excessive moisture, corrosive fumes, vibration, or high ambient temperatures are present.

The wall mount transmitter is designed to install onto a standard electric switch box. Mount the transmitter on an indoor wall approximately 4 to 6 feet above the floor. The base assembly should be positioned with the letters FR/ABS located on the left side.

Duct Mount
The transmitter should be mounted away from fans, corners, heating and cooling coils, and other equipment that will affect the measurement of relative humidity. It should be mounted in a location that receives adequate air flow for proper operation.

The duct mount transmitter should be mounted so that the sensor probe is in the center of the duct.

Outside Air Mount
The transmitter should be mounted in a sheltered area that is protected from rain. Ideally, the transmitter should be located on the north side of the building (under an eave) to prevent sun-heated air from rising up the building’s wall and affecting the relative humidity of the sensor.

The outside air mount transmitter should be mounted with the sensor pointing down to prevent water collection in the sensor cavity.

Notes:
1. Dimensions are in inches (millimeters).
2. *To open the enclosure, squeeze the base where indicated, and remove the cover.
3. **To open the enclosure, squeeze the base where indicated, and remove the cover.
Wiring
Match your transmitter with the corresponding diagrams (Figure 4 through Figure 9), set the switches and wire accordingly. (See Figure 3 below for switch and terminal block locations.) Ensure that all the installation and wiring is in compliance with all national and local codes.

Note: All Voltage Outputs are measured with respect to the POWER SUPPLY / CONTROLLER GROUND.

Wiring for the transmitter should be in a single shielded twisted pair cable or multiple pairs if needed. Use only copper conductors. Do not run transmitter wires and AC power wires together in the same conduit or wire bundle.

Caution!
Running transmitter wires and AC power wires, including earth ground, in the same conduit or wire bundle may cause malfunction due to electrical noise.

1. Ensure that the probe earth ground wire (for Duct and Outside Air units only), the shield wire and the PCB earth ground wire are connected to the mounting screw or the NEAREST (<1.5m) earth ground.

2. The other end of the shield wire MUST be connected to the power supply /controller earth ground ONLY.
