Power + Flexibility = AGILITY

A “one-size-fits-all” rarely works well in the business world, – but it’s especially true in the case of QMS software. Why use systems that force you to change the way you work? To get real value from your QMS, you need software that’s both powerful and flexible.

At Intellect, that’s exactly what we provide. We help businesses like yours achieve quality excellence, with the world’s most configurable and scalable (adaptable, agile, fluid, flexible) QMS platform.

Quality is essential to your business, but to deliver consistently on high customer expectations, meet stringent compliance standards, and keep meticulous records, – you need tools that can easily adapt to your business processes and scale alongside your growth.

The right QMS saves time, shrinks waste, reduces nonconformances, and increases customer satisfaction. It helps companies deliver innovative products to market faster, and with less risk.

A robust quality management system touches upon multiple disciplines, including product design, process management, supplier quality management, customer involvement, strategic planning, cross-functional training, and more.

Choose the QMS platform that delivers end-to-end QMS capabilities, and which can scale up easily as your business grows.

The Most Powerful QMS Built for NetSuite

Intellect is a leading cloud Quality Management System (QMS) software provider, recognized by Gartner and G2 for our highly intuitive and configurable approach.

Powered by a robust No-Code Platform, Intellect is robust, comprehensive, and easy to learn. It offers an integrated suite of out-of-the-box QMS applications with extensive configurability options that allow your team to fine-tune their systems to get exactly what they need.

Intellect’s integration to NetSuite allows for the seamless flow of information between QMS and ERP. In addition, Intellect offers open API’s

and web

services to enable bi-directional data transfer. (our integration with netsuite is unidirectional)

Key Benefits

Streamline and automate workflows

Eliminate paper-based systems

Increase visibility to quality KPIs

Identify and control risk exposure

Be "Always Audit Ready"

Drive continuous improvement

Eliminate manual data entry

Monitor training & certifications

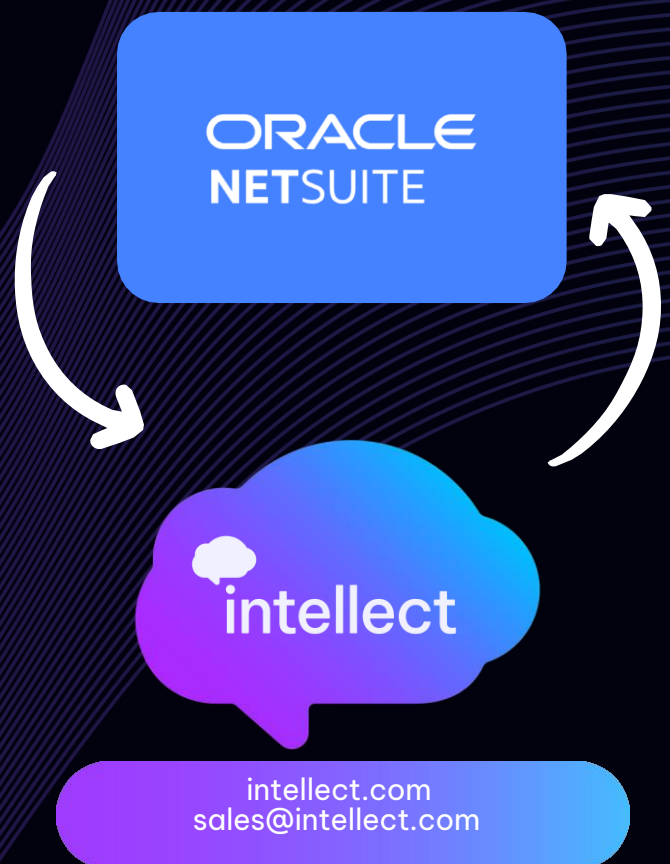

Ease compliance with FDA & other regulatory requirements

The Integration in Action

Intellect's integration to NetSuite provides ultimate flexibility, allowing clients to retrieve any NetSuite Saved Search (NetSuite Report) and deliver it to Intellect, where it can be stored in predefined or user-defined tables.

From there, data can be incorporated into Intellect's QMS in virtually unlimited ways, using Intellect's No-Code configuration capabilities.

- Integrates with NetSuite's Token Based Security
- Can be configured to initiate from Intellect through user action or scheduled macro
- Works with NetSuite Saved Searches created from any NetSuite record type
- Uses Paging to optimize performance

Intellect to NetSuite Integration

- Intellect can receive information from NetSuite work orders, sales orders, purchase orders, or other record types using built-in or user-defined Saved Searches.
- Transactions drive automatic control and management of DHRs (Device History Records) in Intellect, providing one example of the many integration capabilities available. Users can also leverage Intellect's integrations for a wide range of needs beyond DHRs, such as complaint management, nonconformance investigations, and other custom workflows tailored to their business processes.

About Intellect

At Intellect, we believe in empowering people to innovate with our technology. This is why we take the word configurability so seriously. By delivering extreme configurability, our software enables customers and partners to achieve compliance, continuous improvement, and better results.

Intellect QMS is a highly configurable, comprehensive, and integrated suite of QMS applications with native mobile application capabilities. Our robust out-of-the-box apps are built on Intellect's award-winning No-Code Platform. Now, your software can work around your business processes instead of the other way around. You can even build new business apps to automate virtually any business process. Intellect can help you improve operations and meet any FDA regulation, ISO standard, or global GxP requirement.
