Remote Radio Control

M880 Joystick Radio Control

Application

Joystick style Radio Remote Controls offer a perfect solution for Standard cranes and machines requiring proportional or variable speed control and also for large high integrity applications with multiple functions which can not be accommodated by standard push button transmitters. Our large range of joystick style radio transmitters includes solutions fo almost every application imaginable so please contact us with your requirements.

M880 Joystick Radio Advantages

Compact transmitters – All M880 transmitters are compact and lightweight making life more comfortable for the operator and allowing greater freedom of movement.

Large push buttons – extra large push buttons where fitted for ease of use even when wearing industrial gloves.

Extreme Environments – Transmitters and Receivers are constructed from high impact resistant materials and are suitable for operating temperatures from –25 up to +70 deg C.

Automatic Frequency change – New 'AFA' technology effectively kills off the problem of interference as the M880 system continuously searches for, and logs on to the 'cleanest' channel within the operating frequency band.

Contactless optical joysticks – Designed and manufactured in–house, our joysticks guarantee precise handling throughout the life of the radio system, available in both stepless and stepped format.

Certified Safety – The STOP circuit on all M880 Joystick units (except ARES C) complies with the highest European and International standards (ISO13849–1 PLe / SIL3 / Cat 4)

M880 Joystick Transmitter Range

ARES

A recent addition to our comprehensive range of radio transmitters, the ARES is a compact unit available in two versions. ARES 'C' which features a lower category of stop circuit suitable for many standard non load handling applications such as winches and industrial doors and ARES 'E' which in its standard format features four toggle switches on the top panel together with a mushroom head E–STOP button complying with ISO13849–1 PLe / SIL3 / Cat 4. The toggle switches can be replaced with buttons, rotary switches, key switches or potentiometers if required.

A green start button is fitted as standard on one side of the transmitter and space is available for up to five additional buttons or switches.

Details of the ARES 'C' model which is similar in all respects to ARES 'E' but with a lower category (PLc / SIL 1 / Cat 2) stop circuit can be seen on a separate data sheet.

M880 Joystick Transmitter Range (continued)

The latest model to be introduced, KRON is a compact joystick transmitter which will accommodate two twin axis joysticks which can be either multi step or proportional (KRON B2) or a maximum of four single axis proportional joysticks (KRON M4). Both these formats also have space for a small number of additional commands in the form of push buttons, toggle switches, rotary switches or potentiometers. This flexibility makes the KRON transmitter a competitive solution for many applications such as standard overhead cranes and 4/5 function hydraulic cranes. Also available is the KRON NJ transmitter format which can be fitted with any combination of push buttons, toggle switches, rotary switches, key switches and potentiometers providing a solution for machines requiring control of multiple digital and analogue functions.

KRON M4 (also available as M2 or M3)
Basic : Rabbit / Snail
Standard : DSC IN–SLOW, Rabbit / Snail, RPM +/–, Motor On/Off,
Plus : DSC IN–SLOW, Rabbit / Snail, RPM +/–, Motor On/Off, Lights On/Off, Load Indication 90/100% by LED.

KRON M4

KRON NJ

ZEUS2 Joystick Transmitter Range

ZEUS2 is the successor to the popular ZEUS transmitter with improvements such as 'AFA' continuous frequency hunting technology, extended battery life and additional status LED's now included as standard. The ZEUS2 range of transmitters offers all the advantages and configuration possibilities of the KRON unit but with additional space for more auxiliary commands. ZEUS2 also offers the flexibility of the new 'ADD BOX' which can be used either as a digital display to project information via a digital feedback from the radio receiver, or to house even more auxiliary commands. ZEUS2 is available in various formats as shown below

ZEUS2 M6 (also available as M4 or M5)
Standard : – DSC IN–SLOW, Rabbit / Snail, RPM +/–, Motor On/Off,
Plus :– DSC IN–SLOW, Rabbit / Snail, RPM +/–, Motor On/Off, Lights On/Off, Load Indication 90/100% by LED.

THOR2 Joystick Transmitter Range

THOR2 is our largest standard transmitter with space for four twin axis joysticks which can be either multi step or proportional or a maximum of nine single axis proportional joysticks . Both these formats also have space for a large number of additional commands in the form of push buttons, toggle switches, rotary switches or potentiometers. This flexibility makes the THOR2 transmitter a realistic solution for a wide variety of applications requiring multiple commands such as large, high integrity overhead cranes and 8–9 function hydraulic cranes. Also available is the THOR2 NJ transmitter format which can be fitted with any combination of push buttons, toggle switches, rotary switches, key switches and potentiometers providing a solution for machines requiring control of multiple digital and analogue functions.

THOR2 M8 (also available as M4, M5 M6 or M9)
Standard : – DSC IN–SLOW, Rabbit / Snail, RPM +/–, Motor On/Off,
Plus :– DSC IN–SLOW, Rabbit / Snail, RPM +/–, Motor On/Off, Lights On/Off, Load Indication 90/100% by LED.

G4 L/ G4S–BJ

The G4–L transmitter is a custom built unit providing a remote radio control solution for almost any application imaginable, the transmitter panel can accommodate a very large number of commands which can be a combination of joysticks, push buttons, rotary switches, toggle switches, key switches and potentiometers making it ideal for the control of a wide range of highly complex machines in the drilling, mining and quarrying industries.. One popular variant is the G4S–BJ which is fitted with extra large joysticks providing the operator with the traditional feel of joystick control from a control cabin.

Remote Radio Control
M880 Joystick Radio Control

M880 KRON / ZEUS2 / THOR2 / G4 – Standard Features

Rechargeable NiMh Batteries
Extractable, rechargeable NiMh batteries for extra long operating duration up to 22 hours continuous use between charges.

Status LED's
Coloured LED's report the status of the radio link, battery charge level and error diagnostics

PIN Code
Access PIN code can be programmed in to the transmitter to restrict use to authorised personnel

Legends
Standard arrow legends or fully customised legends with symbols or text

Emergency STOP
Mushroom Head E–Stop button featuring functional safety level PLe/SIL3/Cat4

Carrying Strap
Waist belts or shoulder straps are available for all joystick transmitters

M880 KRON / ZEUS2 / THOR2 – Options

Auxilliary commands
All KRON, ZEUS2, THOR2 & G4 joystick transmitters have space available to accommodate additional commands in the form off rotary switches, toggle switches, key switch, pushbutton or potentiometers. The number of commands which can be fitted depends on the transmitter type selected.

Load indication LED's
A standard requirement for many crane applications, particularly tower cranes, load indication LED's are a popular option, normally set to indicate 90% & 100% load status.

Add Box display
The add box display is available with all ZEUS2 & THOR2 transmitters and can be used to house additional commands or as a display screen to show load & status data received through a digital feedback link from the radio receiver.

M880 KRON / ZEUS2 / THOR2 – Options (continued)

iREaDy

I–READY Infra Red Start up
An infra–red directional START operation, requires line of site between transmitter and receiver to start the system increasing safety by reducing the possibility of accidental operation.

MTRS
Multi Transmitter-Receiver System

MTRS Multi machine control
Communication between multiple transmitters and receivers allows classic tandem operations such as catch & release and pitch & catch plus many other configurations. Can be combined with our fixed radio to provide crane to crane or machine to machine communication.

Diagnostic Tool
This tool allows you to connect the transmitter or receiver to a PC to undergo status diagnostics. The data can be viewed by means of an easy and intuitive graphical interface, and can be saved to your PC in editable format.

There are two versions of the tool :
Standard – The transmitter can be connected to the tool only via cable
Plus – In addition to cable connection, the device can be connected in wireless mode allowing diagnostics to be carried out without removing the receiver from the crane

Batteries & Battery Chargers

Rechargeable NiMh Batteries
The M880 Joystick Transmitters benefit from the latest battery technology with 3.6V NiMh batteries providing up to 22 hours continuous use from a single charge. All new systems are supplied c/w 2 batteries and battery charger.

Battery Chargers
Battery chargers are available for 110V or 240V AC and 11–30V DC and can deliver a full charge to the batttery in 2 hours 45 minutes. DC chargers are also available with a 'cigarette lighter' style plug for in–vehicle charging.
